Office of Inspector General (OIG) - an arm of the Department of Health and Human Services, which investigates regulatory infractions, provides compliance advice, and brings enforcement actions

Federal Trade Commission (FTC) - Regulates general business practices to protect consumers against anti-competitive behavior and misleading claims

Drug Enforcement Administration (DEA) - Regulates the distribution and use of narcotics and other controlled substances

Antibodies - are proteins made by the body's immune system to bind and to neutralize foreign invaders.

Monoclonal Antibodies - antibodies used against breast cancer and non-Hodgkin's lymphoma, are created in laboratories to target the immune system of patients to specifically kill cancer cells

Passive Diffusion - Diffusion is the random movement of molecules in fluid. Because of the lipid bilayer construction of the membrane, non-polar (lipid soluble) molecules are able to diffuse and penetrate the cell membrane. Polar molecules, however, cannot penetrate cell membrane readily via passive diffusion and rely on other transport mechanisms.

Facilitated Diffusion - Polar drug molecules have been observed to cross cell membranes. The transport mechanism is via carrier systems. Transmembrane carriers, such as proteins, are similar to receptors and bind polar and non-polar drug molecules. They facilitate the diffusion of drugs across the cell membrane. This diffusion is from a region of high concentration to low concentration.

Active Transport - the mechanism requires energy to drive the transportation of drugs against the concentration gradients, from low to high. The transportation rate is dependent on the availability of carriers and energy supply via a number of biological pathways.

Pinocytosis - involves the engulfing of fluids by a cell. The process commences with the infolding of cell membrane around fluids containing the drug. The membrane then fuses and forms a vesicle with fluid core. In this way, the drug is taken into the cell interior within the vesicle.

First Pass Metabolism - Drug absorbed through the gastrointestinal tract goes into the hepatic portal vein, which drains into the liver. The liver metabolizes the drug, which leads to reduction in the availability of the drug for interaction with receptors
