Studying Advice

- Start studying NOW – not a day or two before the final.
- How do I figure-out what is going to be on the final? How do I figure-out what is most important to study?
 - Unit 4 content: look at the Learning Objectives (1/3 of Final Exam)
 - Unit 1-3 content: look at the list of topics, below. Believe it or not, this is a reduced set of content—not everything from the previous Learning Objectives will be on the final.

Chapter 9: Cell Signaling

- Explain the basic concept of cell signaling, the basic components needed and the general process.
 - The basic things needed for cell signaling include:
 - signaling cells
 - signaling molecule (ligand: a ligand is a molecule that binds specifically to a protein)
 - receptor protein
 - responding cell
 - the basic process includes signaling molecules carries information from one cell to the next. The signaling molecule binds to a receptor protein on or in the responding cell; in turn the responding cell changes its activity or behavior.
- Understand 1) that specific signals bind to specific receptors, 2) that not all cells have the same receptors, 3) that the same receptor in different cell types may result in different responses.
 - Every signaling molecule has its own unique receptors, signal transduction cascade, and response (although there may be some overlap)
 - Not all cells in an organism have the same receptors
 - The same receptor in different cell types may trigger different responses.
- Contrast how small/non-polar and large/polar signals are detected by the receiving cell.
 - Small, non-polar molecules (hydrophobic ligands) bind to intracellular receptors
 - Large, polar molecules (hydrophilic ligands) bind to surface receptors
- Explain the three basic types of cell-surface signal receptors and how their activation initiates the signal transduction cascade.
 - **G Protein-Coupled Receptors (GPCR)** – starts the signal transduction cascade by activating a G protein, evolutionary conserved and all have a similar molecular structure, so it is used widely across organisms. Bacteria have similar proteins, 800ish different types in humans, used for sensing a wide variety of signals. >1/3 of drugs work by manipulating GPCRs.
 - **Receptor Kinases** – An enzyme that becomes active when the receptors binds its ligand. A receptor starts the signal transduction cascade by adding phosphate groups to each
