Plate Tectonics Reading and Comprehension

Directions: Read the following passage and answer the questions that follow.

Once upon a time, in a land not so far away, there was a hidden world full of secrets. This world lay beneath the Earth's surface and was known as the Earth's crust. Our journey today takes us deep into the Earth, where we will explore the exciting adventure of plate tectonics.

In this mysterious land, the Earth's crust is not one solid piece. It is broken into giant puzzle pieces called "tectonic plates." These plates are like enormous floating rafts on a sea of molten rock, known as the mantle. They move around over on slowly, carrying continents and oceans on their backs.

Imagine you are standing on a dance floor, and the plates are your dance partners. These plates don't just stand still; they move around. Sometimes, they crash into each other, pull apart, or slide past each other. It's like a never-ending dance party, happening beneath your feet!

When two plates collide, they can create incredible features like mountains. For example, when the Indian Plate bumped into the Eurasian Plate, it formed the mighty Himalayas, the tallest mountains on Earth. That's one big impact!

Sometimes, plates pull apart, creating cracks or rifts in the Earth's crust. In these rifts, magma (molten rock) rises from the mantle and solidifies to form new crust. This is how mid-ocean ridges and volcanic islands are born.

When plates slide past each other, they can cause earthquakes. The San Andreas Fault in California is a famous example of this kind of plate boundary. The plates move in opposite directions, and when they finally release their pent-up energy, it can shake the ground!

Now, imagine you are on a puzzle board. When you push two puzzle pieces together, they create mountains, just like when tectonic plates collide. When you pull two puzzle pieces apart, they create gaps, just like when plates separate. When you slide two puzzle pieces next to each other, it's like the plates sliding past each other.

The Earth is always changing because of plate tectonics. Continents shift apart, mountains rise, and oceans widen. Plate tectonics is like Earth's very own superhero, shaping the planet over millions of years.
