

The Disappearing Spoon

INTRODUCTION

BRIEF BIOGRAPHY OF SAM KEAN

Sam Kean was born in Sisseton Falls, South Dakota and is very proud of his hometown. Kean earned a Bachelor's degree in English and physics at the University of Minnesota Twin Cities and a master's degree in library science at Catholic University of America. *The Disappearing Spoon* is his first book and it was both a critical and commercial success. It became a bestseller and was nominated by the Royal Society as one of the top 30 science books of 2009. Kean's other books similarly focus on making science accessible to a general audience, often by using entertaining and unexpected stories from the history of science. Along with Kean's four books, he writes for magazines such as *The Atlantic* and *The New York Times Magazine*. He also regularly appears on the radio and gives guest lectures across the world. He lives in Washington, DC.

HISTORICAL CONTEXT

Many historical events are covered in the novel, beginning with what is arguably the very first historical event—the Big Bang. Kean traces the history of the universe, along with our galaxy and solar system, detailing how Earth and the other planets were formed. He also provides an account of the speculation around how the elements died out. Jumping ahead in time, Kean mentions stories from Ancient Greece, such as the Spartans' largely unsuccessful attempt to use chemical weapons against the Athenians. He also considers how Plato's theory of the forms relates to the contemporary scientific understanding of the elements. The majority of the book, however, focuses on the period between the Age of the Enlightenment and the present—particularly from the 17th century onwards, as this is when the periodic table was devised. Key historical events that the book covers within this period include the Australian goldrush, the discovery of DNA, and the Manhattan Project, in which the first nuclear bomb was developed.

RELATED LITERARY WORKS

Only one year after the publication of *The Disappearing Spoon*, another popular science book focusing on the periodic table of elements was also published. This one, Hugh Aldersey-Williams's *Periodic: Table of Cultural History of the Elements*, from Amicus to Zeno, also provides information about the elements through quirky anecdotal facts and historical background. Other popular science books about the periodic table include Tim James's *Demanded: How the Periodic Table Can Explain*

Periodic Everything and James M. Russell's *Demanded: The Periodic Table Explained, Looking More Closely*, many other books cover science and its history for a lay audience. These include Richard Peto's *The Age of Wonder*, which chronicles the boom of a scientific research in the 18th and 19th centuries, Carl Sagan's *Cosmos: A Personal Voyage*, which accompanied the famous TV series of the same name, and Richard Rhodes's *The Making of the Atomic Bomb*, which focuses on some of the same material that appears in *The Disappearing Spoon*.

Changing Minds. In an interview, Kean has stated that he was aware that many readers probably have an automatically unfavorable view of the periodic table, imagining it to be boring. He hopes that *The Disappearing Spoon* will convince them otherwise.

Failed Experiment. Although *The Disappearing Spoon* received generally positive reviews, the review featured in *The New York Times* proclaimed that the book doesn't "truly unpack how the periodic table works."
