## Modelling the helix

### A cut-out 3-D model of DNA

#### Aim

This stunning cut-out 3-D model of DNA can be used to learn about the structure of B-DNA.

#### Equipment and materials

##### Needed by each person or group

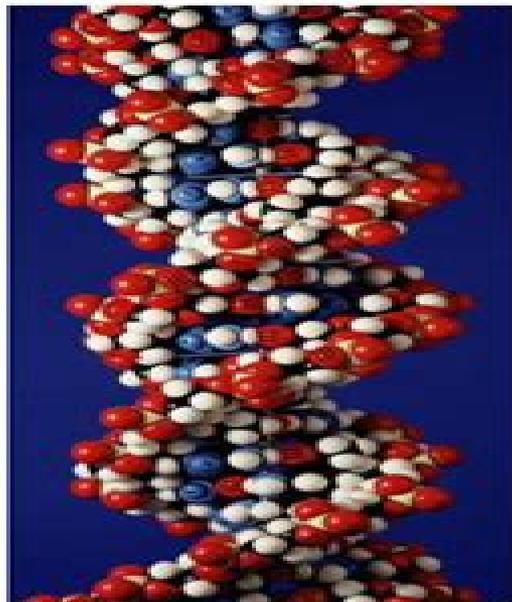

- Nucleotide templates, copied onto card from the following pages
- Scissors
- Bodkin or strong needle, for punching holes through card
- Paper glue
- Drinking straws
- Fine string
- Crayons (if coloured prints of the following pages are not used)
- OPTIONAL: Sharp craft knife and cutting board

#### Procedure

1. Make several copies of the nucleotide templates on card. Ten nucleotide pairs are required for a complete turn of the double helix. To see the major and minor grooves in the double helix clearly, the model needs to have at least 16 nucleotide pairs.
2. If colour copies have not been used, colour in the card appropriately. The colours that are often used in sequencing markers for DNA bases are: Cytosine=Blue; Guanine=Yellow; Adenine=Green; Thymine=Red.
3. Cut out the nucleotide pairs around the thicker, outer lines. Make two small cuts into the card by the phosphate groups where indicated. OPTIONAL: Use a sharp craft knife to make cuts above the deoxyribose molecules where shown.
4. Carefully punch a small hole in each cut-out where shown. This will be the axis of the DNA model through which the string will be threaded. Don't make these holes too big!
5. Fold the sugar-phosphate 'backbones' where indicated by dotted lines. These folds must be made in the directions shown on the accompanying pages. Take care not to make left-handed DNA!

\* The model upon which this one is based was brought to the author's attention by Dr Cheong Kam Khoo of the Singapore Science Centre. We have no idea of its origins other than a cryptic copyright note '© V.R.P. 1959'. If you are V.R.P., please contact us as we'd like to give you credit for this magnificent model, which evidently pre-dated most peoples' interest in DNA.
