

Circulatory System

- Pulmonary circulation occurs when blood is oxygenated through the lungs.
- Systemic circulation occurs when oxygenated blood is sent throughout the body.
- The main parts of the circulatory system are the heart, the blood, and the blood vessels.
- The heart sends blood through the blood vessels to cells.
- Blood transports oxygen, carbon dioxide, amino acids, blood cells, hormones, and other gases throughout the body.
- Blood consists of red blood cells, white blood cells, platelets, and plasma.

The Cycle

- The heart beats 60 to 100 times per minute.
- Blood is sent throughout the body with every heartbeat.
- Blood begins to circulate when the heart relaxes between two heartbeats.
- The blood then releases oxygen and nutrients to the cells and takes on carbon dioxide and other waste.
- The deoxygenated blood returns to the heart after transporting nutrients and oxygen.
- The heart pumps blood back to the lungs to pick up more oxygen, then the cycle repeats.
