Purpose of Database Systems

- In the early days, database applications were built directly on top of file systems

- Drawbacks of using file systems to store data:

  - Data redundancy and inconsistency

    - Multiple file formats, duplication of information in different files

  - Difficulty in accessing data

    - Need to write a new program to carry out each new task

  - Data isolation — multiple files and formats

  - Integrity problems

    - Integrity constraints (e.g. account balance > 0) become "buried" in program code rather than being stated explicitly

    - Hard to add new constraints or change existing ones
