The fear of negative evaluation (FNE) scores for 11 female students known to suffer from the eating disorder bulimia and 14 female students with normal eating are reported in the next table. Assume that each sample is a simple random sample from female student population and the two samples are independent from each other.

Bulimic Students	21	13	10	20	25	19	16	21	24	13	14			
Normal students	13	6	16	13	8	19	23	18	11	19	7	10	15	20

- For each sample, produce a histogram, and a box plot using R. Carefully examine each plot with regards to outliers, symmetry, and modes. Based on your findings give an evaluation of how well each sample agrees with the normality assumption.

- Based on your analysis in part (a), is there any concern regarding the reliability of the confidence interval produced by the two sample t-procedure. Explain your rationale.
