About 71 percent of the Earth's surface is water-covered, and the oceans hold about 96.5 percent of all Earth's water. Water also exists in the air as water vapor, in rivers and lakes, in icecaps and **glaciers**, in the ground as soil moisture and in aquifers. Water is never sitting still due to **water cycle**, our planet's water supply is constantly moving from one place to another and from one form to another. As a result of human activities water contamination happens. Water pollution results when **contaminants** are introduced into the natural environment. For example, releasing inadequately treated **wastewater** into natural water bodies can lead to **degradation** of aquatic ecosystem.

Dumping of domestic sewage which contains pathogens that threaten human health and life. And other sources like oil, mine or chemical spills and illegal dumping in or near water.

In 2010, the government of the Philippines developed a road map to achieve universal water and sanitation services coverage by 2028. **Water.org** is working to support this goal. In the Philippines and around the world, people are navigating the COVID-19 pandemic, and millions are striving to endure this crisis with an added challenge. They lack access to life's most critical resource – water. Now more than ever access to safe water is critical to the health of families in the Philippines. Sustainable solutions were formulated by the Greenpeace Philippines which is the concept of Clean Production. The concept of producing consumer goods in this way entails:
