Aircraft Structural Repair Design:

Low-Cost Aircraft Structural Repair and Maintenance Study W. D. Dotseth, R. W. Nickel, W. E. Routh, ROCKWELL INTERNATIONAL LOS ANGELES CALIF LOS ANGELES AIRCRAFT DIV., 1977 This report documents the research and analysis conducted to 1 identify high cost structural repair and maintenance items in existing U S military aircraft 2 conduct a design study on means to reduce life cycle costs for a number of selected structural problems on fighter bomber and cargo tanker class aircraft and 3 to develop a design handbook to provide guidance and information on methods to reduce aircraft structure cost of ownership This program was limited to existing military aircraft metallic type structures since separate programs for adhesively bonded and advanced composite structure design and repair are being developed by the Structures Division FBS of the Air Force Flight Dynamics Laboratory The design handbook has been published as document No AFFDL TR 76 72 Aircraft Structural Design Handbook for Lower Cost Maintenance and Repair Author *Aircraft Sustainment and Repair* Rhys Jones, A.A. Baker, Neil Matthews, Victor K. Champagne, 2017-12-05 Aircraft Sustainment and Repair is a one stop shop for practitioners and researchers in the field of aircraft sustainment adhesively bonded aircraft joints bonded composites repairs and the application of cold spray to military and civil aircraft Outlining the state of the art in aircraft sustainment this book covers the use of quantitative fractography to determine the in service crack length versus flight hours curve the effect of intergranular cracking on structural integrity and the structural significance of corrosion The book additionally illustrates the potential of composite repairs and SPD applications to metallic airframes Covers corrosion damage assessment and management in aircraft structures Includes a key chapter on U S developments in the emerging field of supersonic particle deposition SPD Shows how to design and assess the potential benefits of both bonded composite repairs and SPD repairs to metallic aircraft structures to meet the damage tolerance requirements inherent in FAA ac 20 107b and the U S Joint Services *Aircraft Structural Design Handbook for Lower Cost Maintenance and Repair* Walter D. Dotseth, R. W. Nickel, W. E. Routh, ROCKWELL INTERNATIONAL LOS ANGELES CA LOS ANGELES AIRCRAFT DIV., 1977 This document has been prepared to serve a growing need in the military to reduce aircraft structural maintenance costs to a more reasonable level commensurate with acceptable life cycle costs It is designed as an informative guide which will aid the aircraft designer in foreseeing maintenance problems and make proper trade off evaluations to optimize the structural design for total life cycle costs The handbook points up several examples of high maintenance cost items on existing in service aircraft and suggests changes to substantially reduce the life cycle cost In addition many other costly maintenance items discovered during visits to military and industry maintenance and repair facilities are cited which could have been avoided or substantially reduced by more cost effective considerations for serviceability during design In this respect the handbook includes not only information on past problem areas in the form of lessons learned but recommended considerations during initial design of every aspect of structural development Since corrosion damage repair was found to be one of the most costly

maintenance items a part of the handbook provides design information usable in its prevention Also since the handbook is directed primarily toward the development of military aircraft a section is devoted to battle damage and design considerations to increase survivability and permit repairs to minimize downtime on the aircraft **Polymer Matrix Composites: Materials Usage, Design, and Analysis** Composite Materials Handbook - 17 (CMH-17),2012-07-10 The third volume of this six volume compendium provides methodologies and lessons learned for the design analysis manufacture and field support of fiber reinforced polymeric matrix composite structures It also provides guidance on material and process specifications and procedures for using the data that is presented in Volume 2 The information provided is consistent with the guidance provided in Volume 1 and is an extensive compilation of the current knowledge and experiences of engineers and scientists from industry government and academia who are active in composites The Composite Materials Handbook referred to by industry groups as CMH 17 is a six volume engineering reference tool that contains over 1 000 records of the latest test data for polymer matrix metal matrix ceramic matrix and structural sandwich composites CMH 17 provides information and guidance necessary to design and fabricate end items from composite materials It includes properties of composite materials that meet specific data requirements as well as guidelines for design analysis material selection manufacturing quality control and repair The primary purpose of the handbook is to standardize engineering methodologies related to testing data reduction and reporting of property data for current and emerging composite materials It is used by engineers worldwide in designing and fabricating products made from composite materials **Scientific and Technical Aerospace Reports** ,1995-08 [Aircraft Production Design](#) James Edgar Thompson,1945 *Composite Repair* Cong N. Duong,Chun Hui Wang,2010-07-07 Bonded composite repairs are efficient and cost effective means of repairing cracks and corrosion grind out cavity in metallic structures and composite structures sustained impact and ballistic damages especially in aircraft structures This book grew out of the recent research conducted at the Boeing Company and the Defence Science and Technology Organisation DSTO Australia over the past ten years Consequently it is predominately a compilation of the work by the authors and their colleagues at these two organizations on the design and analysis of composite repairs Composite Repair is entirely devoted to the design and analysis of bonded repairs focusing on the mathematical techniques and analysis approaches that are critical to the successful implementation of bonded repairs The topics addressed are presented in a sufficiently self explanatory manner and serve as a state of the art reference guide to engineers scientists researchers and practitioners interested in the underpinning design methodology and the modelling of composite repairs The only book devoted entirely to the design and analysis of bonded repairs Focusing on mathematical techniques and analytical methodologies that are critical to the successful implementation of bonded repair A companion reference book to the United States Air Force USAF bonded repair guidelines Guidelines for Composite Repair of Metallic Structures CRMS AFRL WP TR 1998 4113 and the Royal Australian Air Force RAAF Design Standard DEF AUST 995 Covering a variety of topics and effects

Occupational and Career Information Branch,1992 This occupational analysis is directed at the aircraft structural repair technician whose primary responsibilities include assessing damage and corrosion of aircraft structures repairing replacing and modifying sheet metal and or composite structures and repairing fabric surfaces and wood structures This document provides a guide to the analysis a list of occupations involved descriptions of the basic knowledge and experience required and specific knowledge required for sheet metal structures composite structures fabric and wood repair and specialized work practices and processes **Aircraft Mechanic's Pocket Manual** Joseph Albert Ashkouti,1944

Evaluation of Aircraft Structural Repair/Analysis Codes ,1996 This study evaluates existing structural integrity analysis methods for the repair of aircraft structures primarily focusing on composite patch to metal surface structures This research was necessitated by the growing need to keep current aircraft in service well beyond their normal design lives When defects are discovered during inspections the components must be either repaired or replaced In most instances it is not economically feasible to replace entire components Therefore repairing the damaged area s is usually preferred and critical Additionally repairs must be made quickly so that the aircraft may be returned to service as soon as possible The results generated in this study evaluate the status of various repair analysis codes determine which tools are potentially the most useful to ALC engineers and provide information to assist Wright Laboratory engineers in deciding whether these codes address current and future US Air Force requirements However this evaluation does not intend to recommend or disapprove the use of any one software or methodology to Air Force government or contractor personnel Also this evaluation of the composite repair analysis codes relates solely to the versions that were available during the evaluation period of July 95 to 28 Feb 96 This report program covers the determination of ALC requirements a review of current repair analysis codes the determination of equivalent capability and an evaluation of repair analysis codes Bonded Joints and Repairs to Composite Airframe Structures Chun Hui Wang,Cong N. Duong,2015-10-10 Bonded Joints and Repairs to Composite Airframe Structures is a single source reference on the state of the art in this rapidly growing area It provides a thorough analysis of both internal and external joints and repairs as well as discussions on damage tolerance non destructive inspection self healing repairs and other essential information not only on the joints and repairs themselves but critically on how they differ from bonds and repairs to metallic aircraft Authors Wang and Duong bring a valuable combination of academic research and industry expertise to the book drawing on their cutting edge composite technology experience including analytic and computational leadership of damage and repair planning for the Boeing 787 Intended for graduate students engineers and scientists working on the subject in aerospace industry government agencies research labs and academia the book is an important addition to the limited literature in the field Offers rare coverage of composite joints and repairs to composite
