

Initial Start-Up

To obtain warranty coverage, please fill out and return the warranty registration card now.

Inspection

Inspect the UPS upon receipt. Notify the carrier and dealer if there is damage. The packaging is recyclable; save it for reuse or disposal as properly.

Placement

Locate the UPS in a protected area that is free of excessive dust and has adequate air flow. Do not operate the UPS where the temperature and humidity is outside the specified limits.

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the warranty.

Connect to Utility

Operating Instructions

Switch On — Switch Off

With the UPS plugged in, press and release the power/standby button to supply power to the loads plugged into the Battery Power Supplied outlet. The equipment plugged into the Full Time Surge Protected outlet (the top outlet) has power whenever the UPS is connected to an active AC power source.

The Battery Power Supplied loads are immediately powered while the UPS performs a self-test. Press and release the button again to turn off power to the loads. It may be convenient to use the UPS as a master outlet/switch for the protected equipment.

The on-line LED illuminates when the UPS is supplying utility power to the loads.

Self-test

The UPS performs a self-test automatically when turned on, and every time you touch the power/standby button. Automatic self-test saves maintenance requirements by eliminating the need for periodic manual self-tests.

During the self-test, the UPS briefly operates the loads on-battery. If the UPS passes the self-test, it returns to on-line operation.

If the UPS fails the self-test it immediately returns to on-line operation and lights the replace battery LED.

Storage

Storage Conditions

Store the UPS covered and upright in a cool, dry location, with its battery fully charged. Before storing, charge the UPS for at least 4 hours. Disconnect any cables connected to the computer interface port to avoid unnecessarily draining the battery.

Replacing the Battery

Full Time Surge Protected Outlet

The top-most white outlet provides surge protection only. It is rated for 3000VA, 1500W. Equipment plugged into this outlet should require surge protection, but should not require power during a utility power failure. This could include a laser printer, scanner, fax, or audio device.

Warning: The top outlet has voltage as long as the UPS is connected to an active AC power source. It has voltage even when the UPS is turned off.

Battery Power Supplied Outlets

The lower three outlets provide protection from surges and battery backup protection. Plug a computer, monitor, and other "data-critical" devices into these outlets. Never plug a laser printer into the Battery Power Supplied outlets.

Connect the Loads

Plug the loads into the output connectors on the rear of the UPS. To use the UPS as a master outlet switch, make sure that all of the loads are switched on.

Connect Telephone Surge Suppression (Optional)

Connect a single line telephone cable from the telephone jack into the RJ-11 telephone surge protection IN jack on the back of the UPS.

Connect from the OUT jack to the computer with telephone cable.

Connect Computer Interface Port (Optional)

PowerChute® Plus power management software is included with the UPS. Connect the supplied interface cable to the Super computer interface port on the back panel of the UPS. Connect the other end to a dedicated serial port on your computer. See software documentation for installation instructions.

Charge the battery

The UPS charges its battery whenever it is connected to utility power. The battery will charge fully during the first 4 hours of normal operation. Do not expect full runtime during this initial charge period.

Replace Battery

If the battery fails a self-test, the UPS emits short beeps for one minute and the replace battery LED illuminates.

The UPS expects the alarm every five hours. Perform the self-test procedure to confirm replace battery conditions. The alarm stops when the battery passes the self-test.

Shutdown Mode

If there is no power, the host connected to the computer interface port can command the UPS to shut down. This is normally done to preserve battery capacity after a controlled shutdown of the protected system. In shutdown mode the UPS stops supplying power to the load. The online and on-battery LED indicators flash alternately or, if the UPS has shutdown due to a low battery, the UPS will beep once every 10 seconds for approximately 10 seconds. When line power is restored, the UPS will return to on-line operation.

Cold Start

Note: Cold start is not a normal operating condition.

When the UPS is off and there is no utility power, it is possible to cold-start the UPS to power the loads from the UPS's battery.

- Press and hold the on/off/standby button until the UPS begins beeping.
- Release the on/off/standby button during the beeping to start the UPS.

The loads are not affected by a failed test. Recharge the battery overnight and perform the self-test again. If the replace battery LED is still on, replace the battery using the Replacing the Battery procedure.

On Battery

During on-battery operation, the on-battery LED illuminates and the UPS sounds an audible alarm consisting of 4 beeps every 30 seconds. The alarm stops when the UPS returns to on-line operation. The alarm may also be disabled using PowerChute® Plus power management software.

Low Battery

When the UPS is operating on-battery and the energy reserve of the battery runs low, the UPS beeps continuously until the UPS shuts down from battery exhaustion or returns to on-line operation.

Overload

When loads exceed the UPS's capacity, the overload LED illuminates and the UPS emits a sustained tone. The alarm continues on until the overload is removed. Disconnect nonessential load equipment from the UPS to eliminate the overload.

If the overload is severe, the input circuit breaker may trip (the noticeable center plunger of the circuit breaker pops into). Disconnect nonessential load equipment from the UPS to eliminate the overload and press the plunger back in.

If there is AC power and the circuit breaker does not trip during overload, the loads are still protected. If the circuit breaker trips or the UPS attempts to transfer to battery, the loads' power will be shut off. Turn the UPS on-line back on to power the loads.

Extended storage

At -15 to +30 °C (+5 to +85 °F), charge the UPS's battery every 4 months.

At +30 to +40 °C (+85 to +105 °F), charge the UPS's battery every 3 months.
