Larson, 1982 In the 1980 s new developments and commercial offerings will radically change the relationship of the computer and those who wish to use it The emphasis today

is on the needs of the user on systems that are easier to learn easier to use more responsive and more solution oriented
Modern end user facilities allow almost anyone to interact directly with the computer This book is intended for applications
programmers and system analysts who design and implement systems for users who have no expertise in computing It
describes trends and techniques that enable nonexperts to interact easily with computerized systems and use them to
become more productive The papers appearing here were selected because they are the best available descriptions of what
end user facilities will be like for the remainder of this decade
