**Channel Coding in Communication Networks** Alain Glavieux, 2013-03-01 This book provides a comprehensive overview of the subject of channel coding It starts with a description of information theory focusing on the quantitative measurement of information and introducing two fundamental theorems on source and channel coding The basics of channel coding in two chapters block codes and convolutional codes are then discussed and for these the authors introduce weighted

input and output decoding algorithms and recursive systematic convolutional codes which are used in the rest of the book. Trellis coded modulations which have their primary applications in high spectral efficiency transmissions are then covered before the discussion moves on to an advanced coding technique called turbocoding. These codes invented in the 1990s by C. Berrou and A. Glavieux show exceptional performance. The differences between convolutional turbocodes and block turbocodes are outlined and for each family the authors present the coding and decoding techniques together with their performances. The book concludes with a chapter on the implementation of turbocodes in circuits. As such anyone involved in the areas of channel coding and error correcting coding will find this book to be of invaluable assistance. **IEEE**

**International Conference on Electronics, Circuits and Systems**, 2003 [Proceedings](#), 1995 *Study and Design of Architecture for BCH Code Encoder and Decoder* Anuradha A. Gautam, Komal B. Tandel, California State University, Sacramento, 2010. Data corruption during the transmission and reception of data because of noisy channel medium is the most common problem faced in digital communication system. Thus it is hard to get the reliable communication. Thus to get the error free communication we need Error correction code. BCH codes is an acronym for Bose Ray Chaudhuri Hocquenghem invented in 1960s and today they are used as a baseline for many recent Error Correcting Codes. BCH codes are powerful class of multiple error correction codes with well defined mathematical properties. BCH code is used to correct multiple random error patterns. The mathematical properties within which BCH codes are defined are the Galois Field or Finite Field Theory. The main focus of this project is to design encoder and decoder architecture for BCH codes. The design of an encoder is based on Linear Feed Back Shift Register used for polynomial division and the decoder design is based on IBM algorithm to correct the errors occurred during transmission. Also this project report contains comparison of BCH codes with other Error Correcting codes and gives the detailed explanation of salient feature of BCH codes. The combination of BCH codes and LDPC codes are used for error correction for satellite communication standards. The BCH codes architecture is described using hardware description language called Verilog and synthesized using Xilinx Webpack 10.1 ISE. The performance of the whole model is checked in terms of simulation using Xilinx Modelsim. *Index to IEEE Publications* Institute of Electrical and Electronics Engineers, 1996 *Witthayāsān Kasētsārt*, 2013-12 **Conference Proceedings**, 2003 **Science Abstracts**, 1995 **Journal of Scientific and Industrial Research**, 2008-07 [Proceedings of the ...
