1 What is MatrixUser

Most of the medical images (e.g. CT, MRI, PET, etc.) comprises multiple frames which represent slices, phases, timing etc. from the same imaging object. With the powerful support of multidimensional data representation, those images can be saved as multidimensional matrices in Matlab. However, within Matlab, most of image manipulation functions are limited or tailored for two-dimensional matrix. The MatrixUser is a matrix analysis software package which features functions designed and optimized specifically for manipulating multidimensional real or complex data matrix. Within a nice graphical representation, image analysis including multidimensional matrix display, matrix (image stack) processing and rendering can be conveniently accomplished with minimum efforts.

The current MatrixUser version (v2.2) is made available at SourceForge website. MatrixUser is released as a free software. This means that you are free to use and modify this software as your needs, as long as you acknowledge the original author in any future work. If you find MatrixUser useful for the publication of any scientific results, including a line in your acknowledgments section referencing to MatrixUser and this belowing address is requested.
