## 3 MEDICAL DECISION-MAKING

### Instructions for Using TrailBlazer's MDM Coding Method

Coding Medical Decision-Making (MDM) begins with separately coding the three distinct components of MDM. Two of the three components determine the final level of MDM complexity documented in a record of Evaluation and Management (E/M) service. These components are:

1. Number of diagnoses and/or management options.
2. Amount and/or complexity of data reviewed or ordered.
3. Risk of complication and/or mortality.

The TrailBlazer MDM coding method corresponds directly to the components above as follows:

- Section A corresponds to number of diagnoses and/or management options.
- Section B corresponds to amount and/or complexity of data reviewed or ordered.
- Section C corresponds to risk of complication and/or mortality.

Code each component separately using respective Tables A–C, then compare results from Tables A–C to requirements in Table D to determine the overall MDM level.

### Section A

Coding Number of Diagnoses or Management Options – Use the Tables A.1 and A.2 on page 2 to determine the numbers of diagnoses or management options.

Note: In all cases, the information in the clinical record (history and physical) must clearly support diagnostic impressions. Diagnostic impressions listed but not supported elsewhere in the clinical record must not be included in the problem list for coding purposes.
