

Student Grading System

Create a class **StudentRecord** to store and manage student details using the Data Hiding concept.

The class should have the following

1. A private variable `_grades` to store the list of grades for a student.
2. A method `add_grade()` to add a grade to the private variable `_grades`.
3. A method `get_average()` that returns the average of all grades.

Additionally, implement the following

- A method `check_passing()` that checks if the student has passed. A student passes if their average grade is 50 or more.
- Use appropriate getters and setters to ensure data hiding for the grades.

Return the average grade and whether the student passed.
