clinical success in a changing healthcare environment Patient Engagement in Health and Well-being: Theoretical and Empirical Perspectives in Patient Centered Medicine Guendalina Graffigna, Elena Vegni, 2018-02-07 At present citizens are more aware of their health and care rights and more literate about their disease Furthermore the continuous development of technological and bio medical solutions are alimenting the expectation for longer and better life expectancy even despite the diagnosis Patients require to be higher involved in the decision making about their care and are willing to deeply entangle all the possible treatment options their advantages and their risks In other terms citizens today want to be treated not only as client but mainly as partners of the medical action and as co authors of the success of their healthcare pathway Due to this socio psychological change in patients attitude healthcare systems today are claimed to a deep revision of their practices and organizational models in order to become better responsive to patients expectation and more sustainable and effective in the management of their services Patient participation and engagement in healthcare management indeed is today acknowledged by policy makers and healthcare experts as a valuable option to orient changes and actions of the healthcare systems Several empirical studies have demonstrated the positive outcomes of a participatory care approach at the clinical psychosocial and economic levels Patient Engagement thus appears today not only an ethical but also a pragmatic imperative for the innovation and the improvement of healthcare system Moving from these premises this e book collect first research experiences conceptual contribution and review of good practices in the area of Patient Engagement promotion The e book also discuss the relevance and the theoretical linkages between the concept of Patient Engagement and that one of Patient Centered Medicine *Frontiers in the Acquisition of Literacy* Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus the co ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition Lack of progress in either

reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research
