Overtravel, first-curtain latch	N
Overtravel, retard gear	O

## ADJUSTMENT VALUES

Curtain travel time: 11.5 - 12.8 (32mm distance)
Flange-focal distance: 42.14mm 0.02mm (flange to pressure-plate rails) 41.5mm ± 0.02mm (flange to film-rails)
Battery test: needle to just enter lower corner of battery-test square with 1.3V applied
Meter linkage: set ASA 100, 1/1000 second The timing hole in the meter gear segment should align with the

timing dimple in the geared rack. One slot in the coupling disc should now face the front of the camera.

set ASA 100, 1/4 second

The exposure-meter needle should be within the lower metering-limits indicator on the focusing screen.

set ASA 100, 1/2 second

The red metering-limits indicator should move fully into the finder half way between 1/4 second and 1/2 second.

set largest lens aperture (f/1.8 or f/1.4)

The circle at the end of the pointer should overlap the corner of the lower metering-limits indicator on the focusing screen with the f/1.4 lens. The pointer should center between the lower metering-limits indicator and the battery-test square with the f/1.8 lens.

## Overtravel:

- Retard gear. There should be a 0.2 - 0.3mm space gap between the drive lug on the retard gear and the edge of the retard lever in the speeds escapement with the shutter cocked. Adjust by shifting the position of the drive lug (adjustment O).
- Mirror-lifting lever. During the cocking cycle, when the diaphragm-charge lever has moved its maximum distance in a clockwise direction, there should be a 0.1 - 0.2mm space gap between the latch on the mirror-tensioning lever and the tab on the mirror-lifting lever. The overtravel assures that the latch always drops into engagement. With insufficient overtravel, the mirror fails to move to the taking position; with excessive overtravel, the mirror may not move all the way up. Adjust by shifting the position of the latch (adjustment M).
- First-curtain latch. After cocking the shutter, allow the wind lever to return slowly as you watch the first-curtain wind gear. The first-curtain wind gear should rotate

0.1 - 0.2mm before it's engaged and held by the first-curtain latch. Insufficient overtravel could result in the curtains being released before the mirror rises. To adjust, loosen the nut under the lip of the body casting and rotate the eccentric under the first-curtain latch (adjustment N).

## ADJUSTMENT SEQUENCE, SHUTTER SPEEDS:

- Adjust the eccentric at the back of the camera (I in Fig. 3) for the fast speeds 1/125 through 1/1000. If necessary, you can also change the rotational position of the release cam. Adjusting the release cam requires removing the speed-control mechanism plate. Use the release-cam adjustment for the speeds of 1/1000 second and 1/500 second; use the eccentric for 1/250 second and 1/125 second.
- Adjust the retard speeds of 1/30, 1/15, and 1/8 (adjustment P).
- Adjust the pallet speeds of 1/4, 1/2, and 1 second (adjustment Q). If necessary, you can also shift the position of the upper bearing plate of the retard rod as a slow-speed adjustment. Adjust the bearing plate to correct 1/4 second.

## ADJUSTMENT SEQUENCE, METER LINKAGE:

- Set the engagement between the meter gear segment and the meter rack so that the timing marks on the two parts align with one another and with the center of the screw holding the meter rack. As you're holding the parts with the timing marks aligned, the linkage is at the ASA 100, 1/1000 second position.
- Continue holding the linkage with the timing marks aligned. Then seat the coupling disc with one of its four slots facing the front of the camera. The four slots in the coupling disc are slightly offset. So, if one slot doesn't point

web this point of titration is referred to as the equivalence point considering the 1 1 stoichiometry of this acid base reaction  $\text{NaOH}$  aq  $\text{C}_6\text{H}_4\text{COOH}$  aq  $\text{C}_6\text{H}_4\text{COONa}$  aq  $\text{H}_2\text{O}$  l the point of equivalence is the point of titration when the number of moles of naoh na added is equal to the number of moles of khp nb in the
