

Cell Cycle POGIL Notes

Model #1- Cell Cycle

1. There are 4 phases in the cell cycle as shown in model #1.
2. The order of the cell cycle is as follow:
 - a. G1
 - b. S
 - c. G2
 - d. Mitosis
3. The size of the cell increase during the G1 phase
4. The number of cells increase at the end of mitosis
5. As organisms grow, they need more cells. Making more cells is accomplished through the cell cycle. Another way that an organism utilizes the cell cycle to make more cells is when cells are damaged and more cells are needed.
6. Accordingly to model #1, G1 phase is more likely affected if some cancerous cells are much smaller than normal.
7. In model #1, the length of the arrow represents time. If some cancerous cells are smaller than normal, then the time spent to make a cancerous cell would be a lot shorter. This means that cancerous cells can divide very quickly, making this process hard for doctors to treat cancer.

Model #2 – Cell Cycle Data
