Behavioural Economics: A Very Short Introduction Michelle

Baddeley, 2017-01-19 Traditionally economists have based their economic predictions on the assumption that humans are super rational creatures using the information we are given efficiently and generally making selfish decisions that work well for us as individuals Economists also assume that we re doing the very best we can possibly do not only for today but over our whole lifetimes too But increasingly the study of behavioural economics is revealing that our lives are not that simple Instead our decisions are complicated by our own psychology Each of us makes mistakes every day We don t always know what s best for us and even if we do we might not have the self control to deliver on our best intentions We struggle to stay on diets to get enough exercise and to manage our money We misjudge risky situations We are prone to herding sometimes peer pressure leads us blindly to copy others around us other times copying others helps us to learn quickly about new unfamiliar situations This Very Short Introduction explores the reasons why we make irrational decisions how we decide quickly why we make mistakes in risky situations our tendency to procrastination and how we are affected by social influences personality mood and emotions The implications of understanding the rationale for our own financial behaviour are huge Behavioural economics could help policy makers to understand the people behind their policies enabling them to design more effective policies while at the same time we could find ourselves assaulted by increasingly savvy marketing

Michelle Baddeley concludes by looking forward to see what the future of behavioural economics holds for us

The Behavioral Economics of Foreign Exchange Markets Robert Schmidt, 2006 This book deals with psychological factors which may be important for understanding the observable exchange rate movements Thus the study belongs to the new research field of behavioral economics which considers the relevance of psychological factors in economic contexts The main objective of behavioral economists is to develop a more realistic view of the actual human behavior in the context of economics Central to the concept of behavioral economics is the

assumption that humans actual behavior deviates from the ideal of economic rationality due to at least two reasons first decisions are usually based on an incomplete information basis and second the information processing of human beings is limited by their computational capacities Due to these limitations people are forced to apply simple heuristics in information processing Our aim is to analyze the relevance of simple heuristics in the context of foreign exchange markets In our view the decision situation in foreign exchange markets can serve as a prime example for decision situations in which simple heuristics are especially relevant as the complexity of the decision situation is very high
