Dry Lab 1

The Laboratory and SI

- To check into the laboratory
- To become familiar with the laboratory and the laboratory manual
- To learn the rules of laboratory safety and the necessity of practicing these rules in the laboratory
- To learn how to properly organize and record laboratory data
- To develop skills in the use of *Le Système International d'Unités* (SI Units)

OBJECTIVES

All chemical principles, tools, and techniques are developed in the laboratory. The experience of observing a chemical phenomenon and then explaining its behavior is one that simply cannot be gained by reading a textbook, listening to a lecturer, searching the Internet, or viewing a video. It is in the laboratory where chemistry comes alive, where chemical principles are learned and applied to the vast natural "chemistry laboratory" that we call our everyday environment. The objectives of a laboratory experience are to design and build apparatus, develop techniques, observe, record and interpret data, and deduce rational theories so that the real world of science is better explained and understood.

INTRODUCTION

In the laboratory, you will use common equipment and safe chemicals to perform experiments. You record your experimental observations and interpret the data on the basis of sound chemical principles. A good scientist is a thinking scientist trying to account for the observed data and rationalize any contradictory data. Cultivate self-reliance and confidence in your data, even if "the data do not look right." This is how many breakthroughs in science occur.

Stuart Weinstein, author "Ignorance: How It Drives Science"

"There is no surer way to screw up an experiment than to be certain of its outcome."

In the first few laboratory sessions you will be introduced to some basic rules, equipment, and techniques and some situations where you use them. These include laboratory safety rules, *Le Système International d'Unités* (SI Units), the Bunsen burner, and the analytical balance. Additional laboratory techniques are illustrated under **Laboratory Techniques** pages 17–42; others are introduced as the need arises.

Procedure Overview: Laboratory procedures are introduced. A familiarity with laboratory apparatus, the policies regarding laboratory safety, the procedures for presenting laboratory data, and an encounter with the SI units are emphasized.

DRY LAB PROCEDURE

At the beginning of the first laboratory period, you are assigned a lab session containing laboratory equipment. Place the laboratory equipment on the laboratory bench and, with
