Dsc H3 Manual User Guide:

The Metadata Manual Rebecca Lubas, Amy Jackson, Ingrid Schneider, 2013-07-31 Cultural heritage professionals have high levels of training in metadata. However, the institutions in which they practice often depend on support staff, volunteers, and students in order to function. With limited time and funding for training in metadata creation for digital collections, there are often many questions about metadata without a reliable direct source for answers. The Metadata Manual provides such a resource, answering basic metadata questions that may appear and exploring metadata from a beginner's perspective. This title covers metadata basics, XML basics, Dublin Core, VRA Core, and CDWA schemes and provides exercise in the creation of metadata. Finally, the book gives an overview of metadata, including mapping and sharing. Outlines the most popular metadata schema written by practicing metadata librarians. Focuses on what you need to know. Does not require coding experience to use and understand. User's Manual*, 1995 HEC's Data Storage System HEC DSS or DSS is a database system that was developed to meet needs for data storage and retrieval for water resource studies. The system enables efficient storage and retrieval of time series data such as precipitation hyetographs or hydrographs of stage discharge etc and other data types for which storage in blocks of contiguous data elements is most appropriate. The DSS consists of a library of subroutines which can be readily used with application programs to enable retrieval and storage of information. At present, approximately 20 application programs have been adapted in this fashion. In addition, DSS utility programs have been developed: data entry programs, a powerful graphics program, a report generator, and a program that performs mathematical transformations. Macros, selection screens, and other user interface features combine with DSS products to provide a set of tools whose application is limited only by the ingenuity of the user.
