

## EMT CHAPTER 32

"How did you get out of the car?" - ✓✓ A patient is lying under a tree after being involved in a motor vehicle collision. She states that immediately after the crash, she felt okay, but now her legs are numb and tingling. She also has lower back discomfort. Which question is it most important for the EMT to ask next

"I need you to flex both arms across your chest. - ✓✓ Which response shows that the EMT is correctly assessing motor function in the arms of a patient with a potential spine injury

"Keep his head in neutral position while I apply the cervical collar - ✓✓ Which of the instructions from one EMT to another shows the correct application of a cervical collar

"Let me conduct the primary assessment and place a cervical collar on the patient, and then we can start to get her out of this car. - ✓✓ You pull up to the scene of a single-car motor vehicle collision. Emergency Medical Responders (EMRs) are maintaining inline manual cervical spine motion restriction of the 56-year-old driver, who was unrestrained when she struck a tree at a high rate of speed. As you approach the vehicle, you note that the patient appears unresponsive, with blood coming from her nose and ears. Which instruction to the EMRs is most appropriate

"Let's check for extremity PMS before we move the patient to the stretcher - ✓✓ Which instruction would you provide to your team immediately after securing a patient with head, neck, and back pain to the long backboard with appropriate spine motion restriction equipment?

"Let's place a folded towel under his shoulders and back to help maintain head alignment." - ✓✓ A 2-year-old boy fell down a flight of stairs, is crying loudly, and is very difficult to communicate with. Because you are unable to clear the spine, you elect to initiate spine motion restriction precautions. Which instruction would you provide to other EMTs who are initiating this care for the patient?

A deep laceration to the arm can sever peripheral nerves - ✓✓ Based on the structure of the nervous system, which statement is true?

After the patient has been properly secured with straps to the long board - ✓✓ You are maintaining manual cervical spine motion restriction for a patient who is being log rolled, transferred, and secured to a long backboard. At which point will you release the manual spine motion restriction hold

Anterior cord syndrome - ✓✓ An elderly patient fell down a flight of basement stairs and is found at the bottom by family members about 20 minutes later. Your assessment reveals that the patient cannot feel painful stimuli to his hips and legs, nor can he move his legs, but he can feel you lightly touching the skin of his legs. Which type of injury may this be?
