

- and think more generally in terms of a model with p covariates:

$$\begin{aligned}\boldsymbol{\mu} &= \begin{pmatrix} x_{1,0} & x_{1,1} & \cdots & x_{1,p} \\ x_{2,0} & x_{2,1} & \cdots & x_{2,p} \\ \vdots & \vdots & \ddots & \vdots \\ x_{n,0} & x_{n,1} & \cdots & x_{n,p} \end{pmatrix} \begin{pmatrix} \beta_0 \\ \beta_1 \\ \vdots \\ \beta_p \end{pmatrix} \\ &= \mathbf{X}\boldsymbol{\beta}\end{aligned}$$

- The matrix \mathbf{X} is called the *design matrix*.
- When the model has an intercept parameter, then $x_{i,0} = 1 \forall i$ so the **first column** of the design matrix is a vector of 1s.

Define the response (column) vector

$$\mathbf{y} = (y_1, y_2, \dots, y_n)^T.$$

We previously assumed

$$y_i \mid \mathbf{x}_i \stackrel{\text{ind}}{\sim} N\{\mu(\mathbf{x}_i), \sigma^2\},$$

for each $i = 1, \dots, n$.

This can be expressed using matrix notation as

$$\mathbf{y} \mid \mathbf{X} \sim N(\mathbf{X}\boldsymbol{\beta}, \mathbf{I}\sigma^2),$$

where \mathbf{I} is an $n \times n$ identity matrix.

Chapter 6 Linear Models In Mark:

Applied Hierarchical Modeling in Ecology: Analysis of distribution, abundance and species richness in R and BUGS Marc Kéry, J. Andrew Royle, 2015-11-14 Applied Hierarchical Modeling in Ecology Distribution Abundance Species Richness offers a new synthesis of the state of the art of hierarchical models for plant and animal distribution abundance and community characteristics such as species richness using data collected in metapopulation designs These types of data are extremely widespread in ecology and its applications in such areas as biodiversity monitoring and fisheries and wildlife management This first volume explains static models procedures in the context of hierarchical models that collectively represent a unified approach to ecological research taking the reader from design through data collection and into analyses using a very powerful class of models Applied Hierarchical Modeling in Ecology Volume 1 serves as an indispensable manual for practicing field biologists and as a graduate level text for students in ecology conservation biology fisheries wildlife management and related fields Provides a synthesis of important classes of models about distribution abundance and species richness while accommodating imperfect detection Presents models and methods for identifying unmarked individuals and species Written in a step by step approach accessible to non statisticians and provides fully worked examples that serve as a template for readers analyses Includes companion website containing data sets code solutions to exercises and further information

[Regression and Other Stories](#) Andrew Gelman, Jennifer Hill, Aki Vehtari, 2020-07-23 Most textbooks on regression focus on theory and the simplest of examples Real statistical

problems however are complex and subtle This is not a book about the theory of regression It is about using regression to solve real problems of comparison estimation prediction and causal inference Unlike other books it focuses on practical issues such as sample size and missing data and a wide range of goals and techniques It jumps right in to methods and computer code you can use immediately Real examples real stories from the authors experience demonstrate what regression can do and its limitations with practical advice for understanding assumptions and implementing methods for experiments and observational studies They make a smooth transition to logistic regression and GLM The emphasis is on computation in R and Stan rather than derivations with code available online Graphics and presentation aid understanding of the models and model fitting
