

BIOL 101 Chapter 15: Section 3: Questions

1. Describe how plants determine the direction of a shoot.

Plants that grow in an area determine the other organisms that can survive.

2. Explain how temperature affects which plants grow where.

Plants grow best where they're temperature is about 10°C. In regions that are too hot, temperature is too high.

3. Explain how precipitation affects which plants grow where.

The higher the temperature is, the more water the vegetation is.

4. Explain why the climate of a region is different from other regions. How do these factors affect the vegetation that live in a region?

By latitude and altitude. In regions, precipitation is high.

5. The equator passes through the middle of a continent. But the climate is cooler and drier than the equator. Why is that? What is the main reason for this? How does this affect the vegetation that lives in the region?

It might be the distance to the equator.

6. Look at Figure 15.1 and explain the major and minor climate zones. What is the main reason for the major climate zones? How does this affect the vegetation that lives in the region?
