resources which is essential for a more diversified and thus sustainable electricity generation as well as for the nation's endeavor to become an energy hub within the South East Asian region. Under these circumstances, this research conducts a comprehensive literature review regarding the past development as well as the current situation of renewable energy utilization in Thailand, which concludes in the identification of the importance of renewable energy in the given context and closes with both a distinctive need assessment and a conceptual framework for Thailand's future renewable energy strategy. Subsequently, the research introduces a unique primary research endeavor in the form of an explorative expert interview survey, which succeeds in a substantial collection of qualitative and in-depth data. These valuable data are first objectively analyzed and second subjectively interpreted and summarized to become the major source for the derivation of a multitude of potential strategic recommendations for an enhanced future renewable energy utilization development in Thailand. Finally, the entirety of these recommended strategic approaches based on both the secondary and primary research are assembled to develop the Enhanced Renewable Energy Utilization (EREU) model for electricity generation in Thailand as the fundamental finding of this thesis and research project respectively.

In this era of information explosion, computers play an increasingly important role in storing, manipulating, and retrieving data. Database management systems are designed to simplify these tasks and the greater tasks that require that these systems be networked, such as real-time information handling. There are many important problems in the design and development of centralized and distributed database management systems. Solutions are generally first presented in technical papers in journals and conference proceedings. This volume collects a set of these fundamental and up-to-date papers on various problems in the field of database design, implementation, and expansion.
