

Q. 1 Which of the following can fill in the blank in this code to make it compile? (Choose all that apply)

```
public class Ant {  
    _____ void method() { }  
}
```

- A. default
- B. final
- C. private
- D. Public
- E. String
- F. xxx

Answer B, C.

void is a return type. Only the access modifier or optional specifiers are allowed before the return type. Option C is correct, creating a method with private access. Option B is correct, creating a method with default access and the optional specifier final. Since default access does not require a modifier, we get to jump right to final. Option A is incorrect because default access omits the access modifier rather than specifying default. Option D is incorrect because Java is case sensitive. It would have been correct if public were the choice. Option E is incorrect because the method already has a void return type. Option F is incorrect because labels are not allowed for methods.

2 Which of the following compile? (Choose all that apply)

- A. final static void method4() { }
- B. public final int void method() { }
- C. private void int method() { }
- D. static final void method() { }
- E. void final method() { }
- F. void public method() { }

Answer A, D.

Options A and D are correct because the optional specifiers are allowed in any order. Options B and C are incorrect because they each have two return types. Options E and F are incorrect because the return type is before the optional specifier and access modifier, respectively.

3 Which of the following methods compile? (Choose all that apply)

- A. public void methodA() { return; }
- B. public void methodB() { return null; }
- C. public void methodD() { }
- D. public int methodC() { return 3; }
- E. public int methodE() { return 3.0; }
- F. public int methodF() { return; }
- G. public int methodG() { return null; }

Answer A, C, D.

Options A and C are correct because a void method is allowed to have a return statement as long as it doesn't try to return a value. Options B and G do not compile because null requires a reference object as the return type. void is not a reference object since it is a marker for no return type. int is not a reference object since it is a primitive. Option D is correct because it returns an int value. Option E does not compile because it tries to return a double when the return type is int. Since a double cannot be assigned to an int, it cannot be returned as one either. Option F does not compile because no value is actually returned.

Q. 4 Which of the following compile? (Choose all that apply)

- A. public void moreA(int... nums) { }
- B. public void moreB(String values, int... nums) { }
- C. public void moreC(int... nums, String values) { }
- D. public void moreD(String... values, int... nums) { }
- E. public void moreE (String[] values, ...int nums) { }
- F. public void moreF (String... values, int[] nums) { }
- G. public void moreG (String[] values, int[] nums) { }

Answer A, B, G.

Options A and B are correct because the single vararg parameter is the last parameter declared. Option G is correct because it doesn't use any vararg parameters at all. Options C and F are incorrect because the vararg parameter is not last. Option D is incorrect because two vararg parameters are not allowed in the same method. Option E is incorrect because the ... for a vararg must be after the type, not before it.

5 Given the following method, which of the method calls return 2? (Choose all that apply)

```
public int howMany(boolean b, boolean... b2) {  
    return b2.length;  
}
```

- A. howMany()
- B. howMany(true)
- C. howMany(true, true)
- D. howMany(true, true, true)
- E. howMany(true, {true})
- F. howMany(true, {true, true})
- G. howMany(true, new boolean[2])
