

Chapter 4 Systems Design: Process Costing

8. The production report of a company using the FIFO cost method likely would show goods transferred from a department in two parts--one part consisting of units from the beginning inventory completed and transferred, and the other part consisting of units that were both started and completed during the month.

Answer: True Level: Medium LO: 7 Appendix: 4

9. In computing the cost per equivalent unit on the production report, costs in the beginning work in process inventory are kept separate from current period costs when the FIFO method is used.

Answer: True Level: Medium LO: 8 Appendix: 4

10. A major advantage of the FIFO method is that it allows managers to judge the performance of the current period independently of the performance of the prior period.

Answer: True Level: Medium LO: 9,10 Appendix: 4

11. Under a JIT inventory system, the differences between FIFO and weighted-average costing methods are reduced.

Answer: True Level: Easy LO: 9,10 Appendix: 4

12. When the FIFO method is used to prepare a production report, costs to the next department are accounted for in two separate blocks.

Answer: True Level: Easy LO: 9 Appendix: 4

13. Costs are accumulated by department in a process costing system.

Answer: True Level: Easy LO: 10

14. Operation costing is a hybrid system that employs certain aspects of both job-order and process costing.

Answer: True Level: Easy LO: 10

15. Under job-order costing, costs are accumulated by department and are assigned equally to all units passing through the department during the period.

Answer: False Level: Easy LO: 10

Design for Electrical and Computer Engineers J. Eric Salt, Robert Rothery, 2001-09-19 Eric Salt and Robert Rothery's Design for Electrical and Computer Engineers guides students through each stage of the engineering process from start to finish As students work through the text they will develop a strong theoretical framework and master practical techniques that they can rely on throughout their academic and professional careers Students learn how to define a customer's needs and the design problem synthesize solutions evaluate alternatives and complete the systems level design The text also addresses the important issues of documentation and testing In addition students will find a number of examples and templates throughout the text including suggested outlines for design documents such as design specifications project plans and test plans This text is suitable as a main text or supplement for a junior senior or graduate course in Electrical Engineering Design or Project Management Wireless Transceiver Systems Design Wolfgang Eberle, 2008-06-17 1 During the last 30 years wireless in communications has grown from a niche market to an economically vital consumer mass market The first wave with the breakthrough of 2G mobile telephony focused on speech placed wireless communication in the consumer mass market In the current second wave services are extended toward true multimedia including interactive video audio gaming and broadband Internet These high data rate services however led to a separate IP centric family of wireless personal WPANs and local area networks WLANs outside the 2G 3G mobile path Since diversity between data and voice centric solutions and the competition between standardized and proprietary approaches is today more blocking than enabling effective development of successful products a third major wave is unavoidable a consolidation of both worlds in portable devices with flexible multistandard communication capabilities enabled for quality of service 2 aware multimedia services At the same time the dominance of wired desktop personal computers has been undermined by the appearance of numerous

portable and smart devices laptops notebooks personal digital assistants and gaming devices Since these devices target low cost consumer markets or face wired competition time to market is crucial designed in flexibility is important power operation is a key asset yet device cost shall be at a minimum This book approaches this design tradeoff challenge from the perspective of the system architect The system architect is concerned both in an efficient design process and in a competitive design result

Tactile Display for Virtual 3D Shape Rendering Alessandro Mansutti,Mario Covarrubias Rodriguez,Monica Bordegoni,Umberto Cugini,2017-02-15 This book describes a novel system for the simultaneous visual and tactile rendering of product shapes which allows designers to simultaneously touch and see new product shapes during the conceptual phase of product development This system offers important advantages including potential cost and time savings compared with the standard product design process in which digital 3D models and physical prototypes are often repeatedly modified until an optimal design is achieved The system consists of a tactile display that is able to represent within a real environment the shape of a product Designers can explore the rendered surface by touching curves lying on the product shape selecting those curves that can be considered style features and evaluating their aesthetic quality In order to physically represent these selected curves a flexible surface is modeled by means of servo actuated modules controlling a physical deforming strip The tactile display is designed so as to be portable low cost modular and high performing in terms of the types of shape that it can represent
