- ★ 1. An architect is drawing a floor plan for a garage on a coordinate plane. The architect has located three corners of the garage at $A(0, 0)$, $B(4, 6)$, and $C(7, 4)$. If the garage must be in the shape of a rectangle, what are the coordinates of point D ? Justify your answer.

A is at $(0, 0)$ and B is at $(4, 6)$, the slope of the line is $(6 - 0) / (4 - 0) = 3/2$. Since the line that connects C and D is perpendicular to the line connecting A and B , the slope of the line connecting C and D is also $-2/3$. The y -coordinate of C is 4, we can write the equation of this line as $y = -2/3x + 4$. We know that the x -coordinate of D is 7, so we can substitute this value into the equation to find the y -coordinate of D . This gives us $y = -2/3(7) + 4 = -14/3 + 4 = -10/3 + 12 = 2$. Making the coordinates of D $(7, 2)$.

- ★ 2. An ironing board manufacturer designs a folding ironing board with two legs. Each leg runs diagonally under the board from one end of the board to the floor, crossing over the other leg in the middle. Both legs are the same length. The designer connects the endpoints of the legs to form a quadrilateral. Which specific quadrilaterals could be formed? Explain your answer.

The quadrilateral that can be formed is a parallelogram. The ironing board's two equal-length legs that cross over one another to form two sets of congruent adjacent sides are the cause of this. If the opposing sides of a quadrilateral are parallel and congruent, the shape is a parallelogram. The ironing board forms a quadrilateral, and since its two sets of neighboring sides are parallel and congruent, it must be a parallelogram.

- ★ 3. The endpoints of one diagonal of quadrilateral $WXYZ$ are $W(7, 12)$ and $Y(12, 2)$. The endpoints of the other diagonal are $X(12, 12)$ and $Z(4, 8)$.
- Are the diagonals congruent? How do you know?
 - Are the diagonals perpendicular? Explain.
 - Do the diagonals bisect each other? Explain.
 - What is the most descriptive name for quadrilateral $WXYZ$?

Assessment Standards for School Mathematics National Council of Teachers of Mathematics, 1995 This document was created because of the need for new assessment strategies and practices to be developed to enable teachers and others to assess students performance in a manner that reflects the NCTM s reform vision for school mathematics Instead of assuming that the purpose of assessment is to rank students on a particular trait the new approach assumes that high public expectations can be set that every student can strive for and achieve that different performances can and will meet agreed on expectations and that teachers can be fair and consistent judges of diverse

student performances The first sections of the document discuss six mathematics assessment standards 1 The Mathematics Standard 2 The Learning Standard 3 The Equity Standard 4 The Openness Standard 5 The Inferences Standard and 6 The Coherence Standard The use of the assessment standards is then discussed in the context of different purposes such as monitoring students progress making instructional decisions evaluating students achievement and evaluating programs The next section discusses what should happen next with regard to mathematical assessment The document concludes with a glossary and a selected assessment bibliography with 116 citations Contains 28 references MKR

Analog VLSI Mohammed Ismail, Terri Fiez, 1994 This book presents the first comprehensive treatment of analog VLSI design for signal and information processing applications by blending the basic design concepts of both traditional and contemporary analog VLSI The breadth and level of details of topics covered are unique reflecting the birth of a new generation of analog VLSI circuits Each chapter provides basic introductory material in a tutorial manner with examples or case studies at the circuit and or system level Outstanding features of the text include coverage of the latest in analog VLSI putting students and practicing engineers on the cutting edge of this exciting field thorough coverage of topics unique to this book including low voltage BiCMOS current mode and neural information processing oversampled data converters statistical design analog testability analog CAD analog layout and analog VLSI interconnects avoids lengthy coverage of device physics and IC fabrication and goes straight to the design and applications of analog VLSI circuits extensive use of SPICE in numerous examples and problem sets worked examples from a realistic silicon chip and end of chapter problems assist reader comprehension and an instructor s manual containing a complete listing of problem solutions and SPICE netlists
