Intelligent Control Systems with an Introduction to System of Systems Engineering Thrishantha Nanayakkara, Ferat Sahin, Mo Jamshidi, 2018-09-03 From aeronautics and manufacturing to healthcare and disaster management systems engineering SE now focuses on designing applications that ensure performance optimization robustness and reliability while combining an emerging group of heterogeneous systems to realize a common goal Use SoS to Revolutionize Management of Large Organizations Factories and Systems Intelligent Control Systems with an Introduction to System of Systems Engineering integrates the fundamentals of artificial intelligence and systems control in a framework applicable to both simple dynamic systems and large scale system of systems SoS For decades NASA has used SoS methods and major manufacturers including Boeing Lockheed Martin Northrop Grumman Raytheon BAE Systems now make large scale systems integration and SoS a key part of their business strategies dedicating entire business units to this remarkably efficient approach Simulate Novel Robotic Systems and Applications Transcending theory this book offers a complete and practical review of SoS and some of its fascinating applications including Manipulation of robots through neural based network control Use of robotic swarms based on ant colonies to detect mines Other novel systems in which intelligent robots trained animals and humans cooperate to achieve humanitarian objectives Training engineers to integrate traditional systems control theory with soft computing techniques further nourishes emerging SoS technology With this in mind the authors address the fundamental precepts at the core of SoS which uses

human heuristics to model complex systems providing a scientific rationale for integrating independent complex systems into a single coordinated stabilized and optimized one They provide readers with MATLAB code which can be downloaded from the publisher s website to simulate presented results and projects that offer practical hands on experience using concepts discussed throughout the book

Feedback Control Problems Dean K. Frederick, Joe H. Chow, 2000 This book is the first complete text in the BookWare Companion Series TM to thoroughly integrate the use of the MATLAB computing environment into the standard sequence of courses taken by electrical engineering majors Use of this text makes it possible to focus on the problems being solved rather than on the programming necessary to obtain a solution The authors utilize a computer biased approach in which computer solutions and theory are viewed as mutually reinforcing rather than as an either or proposition Additionally they adhere to the axiom that one learns by doing rather than by listening this text features more than 100 examples 200 exercises and 250 MATLAB scripts that directly support the authors flexible treatment of discrete and continuous time This Updated Printing revises the book and code examples available for downloading from the Brooks Cole Web Site to MATLAB V5
