

**5.2 Practice A**

Tell which equation you would choose to solve for one of the variables when solving the system by substitution. Explain your reasoning.

1.  $y = 5x - 2$

$2x + 9y = 10$

2.  $3x - 7y = 12$

$3x - 12y = 6$

3.  $\frac{1}{5}x + y = 8$

$4x - 3y = 1$

Solve the system of linear equations by substitution. Check your solution.

4.  $y = x + 3$

$y = 5x - 5$

5.  $y = 3x - 1$

$y = x - 7$

6.  $x = 5y + 2$

$x - 4y = 5$

7. The gym has a total of 25 treadmills and stationary bikes. There are 7 more stationary bikes than treadmills.
- Write a system of linear equations that represents this situation.
  - How many treadmills are in the gym?
  - How many stationary bikes are in the gym?

Solve the system of linear equations by substitution. Check your solution.

8.  $x - y = 9$

$2x + 5y = 4$

9.  $2x + 3y = 25$

$4x - y = 15$

10.  $3x - 6y = 2$

$4x + 3y = -1$

11. A drawer contains 24 spoons and forks. There are three times as many spoons as forks.
- Write a system of linear equations that represents this situation.
  - How many spoons are in the drawer?
  - How many forks are in the drawer?
12. The perimeter of a rectangle is 34 centimeters. The length is two more than twice the width. Write and solve a system of linear equations to find the length and the width of the rectangle.
13. A parking lot has a total of 60 cars and trucks. The ratio of cars to trucks is 7 : 3. How many cars are in the parking lot? How many trucks are in the parking lot? Justify your answers.

*Introductory Differential Equations* Martha L. Abell, James P. Braselton, 2009-09-09 This text is for courses that are typically called Introductory Differential Equations Introductory Partial Differential Equations Applied Mathematics Fourier Series and Boundary Value Problems The text is appropriate for two semester courses the first typically emphasizes ordinary differential equations and their applications while the second emphasizes special techniques like Laplace transforms and partial differential equations The text follows a traditional curriculum and takes the traditional rather than dynamical systems approach Introductory Differential Equations is a text that follows a traditional approach and is appropriate for a first course in ordinary differential equations including Laplace transforms and a second course in Fourier series and boundary value problems Note that some schools might prefer to move the Laplace transform material to the second course which is why we have placed the chapter on Laplace transforms in its location in the text Ancillaries like Differential Equations with Mathematica and or Differential Equations with Maple would be recommended and or required ancillaries depending on the school course or instructor

Technology Icons These icons highlight text that is intended to alert students that technology may be used intelligently to solve a problem encouraging logical thinking and application Think About It Icons and Examples Examples that end in a question encourage students to think critically about what to do next whether it is to use technology or focus on a graph to determine an outcome Differential Equations at Work These are projects requiring students to think critically by having students answer questions based on different conditions thus engaging students

Precalculus Cynthia Y. Young, 2010-01-19 Engineers looking for an accessible approach to calculus will appreciate Young s introduction The book

offers a clear writing style that helps reduce any math anxiety they may have while developing their problem solving skills It incorporates Parallel Words and Math boxes that provide detailed annotations which follow a multi modal approach Your Turn exercises reinforce concepts by allowing them to see the connection between the exercises and examples A five step problem solving method is also used to help engineers gain a stronger understanding of word problems

**Basic Mathematics Through Applications** AKST,2000-11-29 *Comprehending Math* Arthur A. Hyde,2006 For those who devour *Comprehending Math* as I did their teaching will be clearer bolder more connected And for the ultimate beneficiaries they will have a chance to understand just how integrally our world is connected Ellin Oliver Keene author of *Mosaic of Thought* No matter the content area students need to develop clear ways of thinking about and understanding what they learn But this kind of conceptual thinking seems more difficult in math than in language arts and social studies Fortunately we now know how to help kids understand more about mathematics than ever before and in *Comprehending Math* you ll find out that much of math s conceptual difficulty can be alleviated by adapting what we have learned from research on language and cognition In *Comprehending Math* Arthur Hyde coauthor of the popular *Best Practice* shows you how to adapt some of your favorite and most effective reading comprehension strategies to help your students with important mathematical concepts Emphasizing problem solving Hyde and his colleagues demonstrate how to build into your practice math based variations of K W L visualizing asking questions inferring predicting making connections determining importance synthesizing He then presents a practical way to braid together reading comprehension math problemsolving and thinking to improve math teaching and learning Elaborating on this braided model of approach to problem solving he shows how it can support planning as well as instruction *Comprehending Math* is based on current cognitive research and features more than three dozen examples that range from traditional story problems to open ended or extended response problems and mathematical tasks It gives you step by step ideas for instruction and smart specific advice on planning strategy based teaching Help students do math and get it at the same time Read *Comprehending Math* use its adaptations of familiar language arts strategies and discover how deeply students can understand math concepts and how well they can use that knowledge to solve problems
