

Chapter One. Text and discourse

I. THE SCOPE OF TEXT-LINGUISTICS

The scope of **text-linguistics** can be described as the study of language beyond the clause. The approach to texts developed is functional and largely derived from M.A.K. Halliday's Functional Grammar, where the clause is the highest unit in the grammatical rank scale. The use of the term 'sentence' as the largest unit of grammatical analysis and the upper limit of structural statement is extended in linguistic description so 'clause' and 'sentence' will be used here interchangeably.

'Beyond the clause' refers to the metaphorical modes of expression, more specifically, metaphor, metonymy and synecdoche as forms of lexical variation deriving from the semantic relation of **elaboration, extension and enhancement**. Here the meaning of 'beyond' is 'outside' and, in a way, 'above' the clause. Texts have been traditionally situated 'above the sentence' following the immediate constituents progression PHONEMES → MORPHEMES → PHRASES → CLAUSES → TEXT. Halliday avoids the term 'sentence' but uses 'clause complex' with a similar meaning. Consequently, in the section 'above the clause' he analyses the clause complex. In functional grammar, cohesion is placed 'around the clause', intonation and rhythm are displayed with other constituent structures, so they are presented 'beside the clause'.

Considering the text as a unit beyond the sentence is more accurate than simply a unit 'above' the sentence because the relationship between clauses and texts is not one of constituency. A text should be regarded as a semantic unit, a **unit of meaning** rather than a formal unit. Texts are realized by clauses.

This interpretation captures the differences in structural integration among the parts of a text and the parts of a clause. Many scholars refer to text-linguistics and discourse analysis interchangeably. A distinction is attempted here. It is possible to speak of the grammar of a text by analogy with clause grammar, but it is only possible to speak of discourse analysis.

Distinguishing text from discourse is not easy. Modern linguistics attempted the study of 'language by itself' only to find increasing difficulty leading to a deadlock caused by the exclusion of context. The beginnings were promising because the isolation of real sound units and their matching with theoretical units was viable. Next came morphology but the 'heaviness' of visual representations of the abstractions called 'morphemes' was no longer transparent. Also, the map of all the morphemes in a language was not feasible.

Modern linguistics was based on four principles:

- Study one domain of language at a time.
- Describe each domain as a system of theoretical units corresponding to the practical units in the data.
- Describe each unit by the features that clearly identify it from the rest.
