Use your book or dictionary to fill in vocabulary terms in this paragraph about food chains.

In a food chain, matter and energy move from autotrophs to heterotrophs to decomposers. A food chain is made of many steps; each organism in the food chain represents a step called a trophic level. An herbivore is a heterotroph that eats only plants, whereas a carnivore preys on other heterotrophs. An omnivore eats both plants and animals. Nutrients are returned to the soil, air, and water by detritivores. A model that shows all the possible feeding relationships at each trophic level is called a food web. If you were a scientist and you wanted to determine the weight of living biomass at a certain trophic level, you would measure the biomass.

Academic Vocabulary

foundation

Use foundation in a sentence which shows its scientific meaning.
