

Chapter 9

Application: International Trade

Review Questions

Suppose that a country that has been isolated from the rest of the world decides to open its borders to international trade. The country produces chickens and soccer balls. On what basis can the country decide which good to import and which good to export?

ANSWER: The country should export the good in which it has a comparative advantage. Comparative advantage is determined by looking at the domestic price relative to the world price. If the domestic price is lower than the world price, the country has a comparative advantage and should export the product. If the domestic price is higher than the world price, the country does not have a comparative advantage and should import the product.

If Country A allows trade and becomes an exporter of food to Country B, which group or groups in each country are better off, and which are worse off?

ANSWER: Producers of food in Country A are better off and producers of food in Country B are worse off. Consumers of food in Country A are worse off, and consumers of food in Country B are better off.

If Country A allows trade and becomes an importer of clothing from Country B, which group or groups in each country are better off, and which are worse off?

ANSWER: Producers of clothing in Country A are worse off and producers of clothing in Country B are better off. Consumers of clothing in Country A are better off, and consumers of clothing in Country B are worse off.

Suppose that Canada can produce every product at an absolutely lower cost than can Great Britain. Does it pay for Canada to trade with Great Britain? Explain.

ANSWER: Since international trade is based on comparative advantage, and comparative advantage depends on relative prices or opportunity cost, it is almost certain that Canada and Great Britain will each have comparative advantage in the production of some goods; hence, it will pay for them to trade with each other.

The before-trade domestic price of honey in the United States is \$6 per gallon. The world price of honey is \$5 per gallon. The U.S. is a price-taker in the honey market. Given this information, answer the following questions.

- Will the U.S. import or export honey?
- What will the price of honey be in the U.S. if free trade is allowed?
- Who will benefit from free trade in this case?
- Who will lose from free trade?

ANSWER:

- The U.S. will import honey because the world price is below the domestic price.
- The price of honey in the U.S. will now be \$5, the same as the world price.
- Consumers in the U.S. will benefit because of a lower price for honey.
- Producers will lose because they will have to take a lower price for their honey.
