

GENETIC engineering

What is genetic engineering?

Genetic engineering is the process of **modifying** an organism's **genome** / DNA by introducing a **gene** from another organism, usually belonging to a different **species**.

Spider

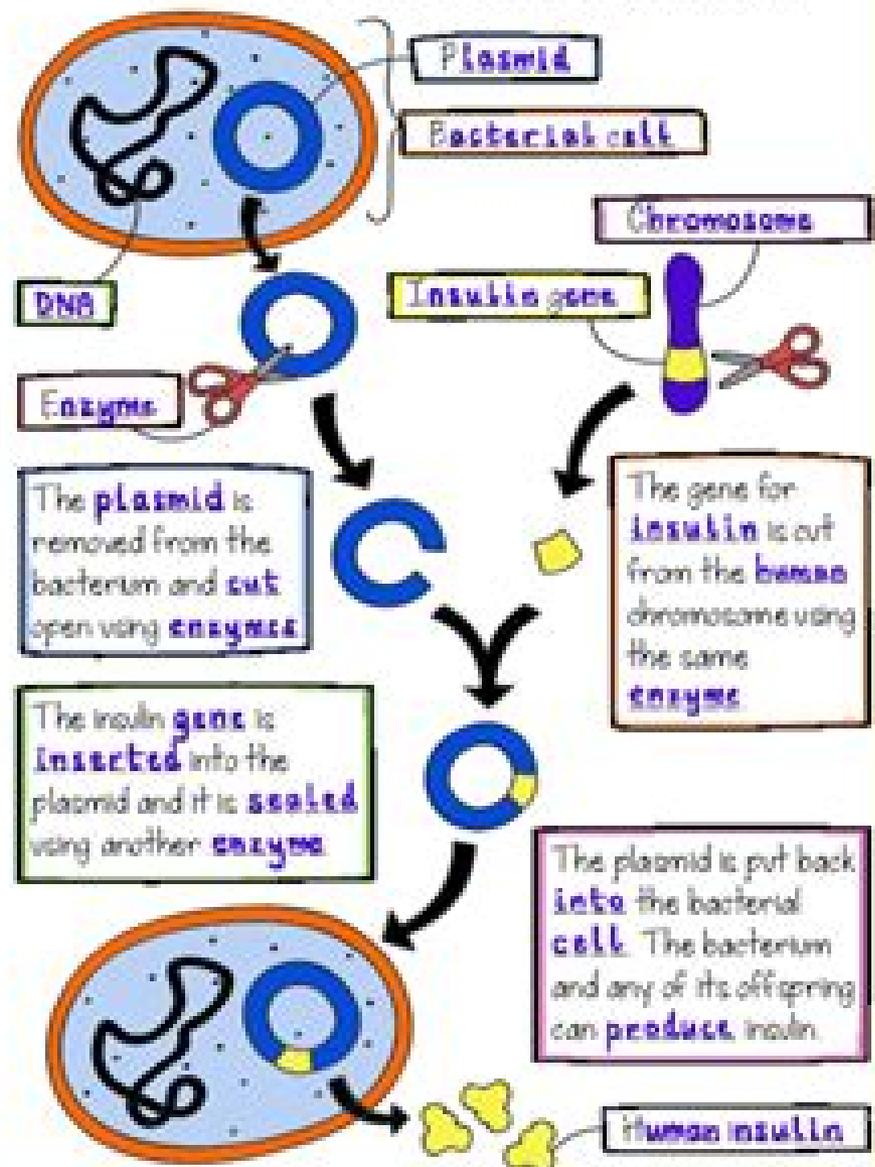

Goat

How is genetic engineering done in animals & plants? Explain using this example.

The desired gene is cut out of the **DNA** of one organism using **enzymes** and then **inserted** into the DNA of the second organism. This is done at a very early stage of **development**. In this example, the spider's gene for **silk** has been **transferred** into a goat so it can produce strong silk protein in its **milk**.

Explain how bacteria can be genetically modified to produce human insulin.

Answers For Genetic Engineering Challenge
