**Differences Between the Security Models of Android and iOS** Samuel Hopstock, 2019-07-24 Seminar paper from the year 2018 in the subject Computer Science IT Security grade 1 0 Technical University of Munich course Seminar Mobile Application Security language English abstract Smartphones are being used as the preferred device for as many things as possible in today s world This is why having secure phones that are resilient against attacks targeting their users data becomes more and more important This paper tries to assess what measures device vendors have taken to ensure those attacks will not be successful Because the market is mostly divided between Google s Android and Apple s iOS we put our focus on those two operating systems and compare their respective security models Additionally this comparison will be evaluating how those models have changed over time since the beginning of the smartphone era around 2010 The last part of this analysis will take a look at a different view on smartphones the perspective of so called power users Those are people that do not only use their smartphone for downloading some apps and surfing the Internet but rather want to do some lower level customization to the operating system by rooting their Android device or jailbreaking their iPhone This process of gaining full privileges on the phone not only creates advantages for the user but can also have rather negative implications on the device s security How exactly does this affect the protections implemented by the vendor

*From Encryption to Quantum Computing* Ot van Daalen, 2024-09-01 This book examines the implications of information security which plays such an important role in modern digital infrastructure Information security technologies restrict the mis use of this infrastructure while also constantly being probed by researchers intelligence agencies and criminals One can see this cycle of making and breaking everywhere in the digital sphere An important example of this cat and mouse game is the development of quantum computers which may in the near future break some widely used encryption technologies This cycle also has implications for human rights weakening

encryption may affect privacy for example But the relationship between human rights and information security has not been investigated in depth before In this study state obligations relating to information security are analysed under the European Convention for Human Rights and the EU Charter for Fundamental Rights focusing on issues as human rights compatible encryption policy on how governments should deal with vulnerabilities in software and whether governments can curtail the development and export of quantum computers This book analyses the human rights compatibility of quantum computing governance and offers unique insights into the connection between human rights and information security that will be relevant for legal practitioners policy makers and academics involved in this field of research Ot van Daalen is Assistant Professor at the Institute for Information Law IViR Faculty of Law of the University of Amsterdam the Netherlands
