

GER - Analyzing Data and Cricket Chirps

In order to determine if cricket chirps are influenced by temperature, scientists recorded the chirps at different temperatures over a month-long period.

(1)

Day	Temperature (Fahrenheit)	Average Number Chirps (per 15 sec)
5/05	54	15
5/09	58	21
5/11	60	26
5/20	64	36
5/22	66	40
5/27	70	49
5/31	76	54
5/31	78	51

1) Consider the question being asked by the researchers. One column of the data is not relevant to the question. Shade this column.

2) What is the independent (manipulated) variable in the experiment?

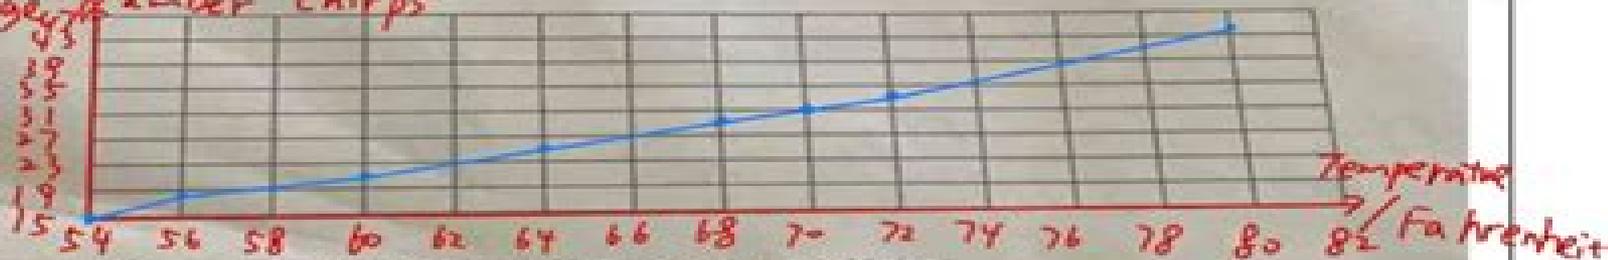

Temperature

What is the dependent (responding) variable?

Average Number Chirps

3) Graph the data, place the independent variable on the x axis. You can choose a line or a bar graph. Label the axes. You do not need to start the axes at 0.

Average Number Chirps

4) Make a CLAIM about the relationship between temperature and chirping.

The higher the temperature, the more chirping.

5) Use EVIDENCE from your graph to support that claim. Summarize trends observed in the graph.

if temperature 1 is higher than temperature 2, then the chirping 1 is more than chirping 2.

6) Provide REASONING to connect evidence to the claim. (if _____ occurs, then _____ will be observed)

6) If the increase of temperature occurs, then the cricket will chirp more than before per 15 seconds will be observed.
