## The Respiratory System

KEY

Body cells require an abundant and continuous supply of oxygen to carry out their activities. As cells use oxygen, they release carbon dioxide, a waste product that must be eliminated from the body. The circulatory and respiratory systems are intimately involved in obtaining and delivering oxygen to body cells and in eliminating carbon dioxide from the body. The respiratory system is responsible for gas exchange between the pulmonary blood and the external environment (that is, external respiration). The respiratory system also plays an important role in maintaining the acid-base balance of the blood.

Questions and activities in this chapter consider both the anatomy and physiology of the respiratory system structures.

## FUNCTIONAL ANATOMY

1. The following questions refer to the primary bronchi. In the spaces provided, insert the letter *R* to indicate the right primary bronchus and the letter *L* to indicate the left primary bronchus.

- Which of the primary bronchi is larger in diameter? Right bronchus
- Which of the primary bronchi is more horizontal? Right bronchus
- Which of the primary bronchi is the most common site for lodging of a foreign object that has entered the respiratory passageways? Right bronchus
