Design Studies and Intelligence Engineering Valentina Emilia Balas, Qun Wu, 2023-01-15. The technologies applied in design studies vary from basic theories to more application based systems. Intelligence engineering also plays a significant role in design sciences such as computer aided industrial design, human factor design and greenhouse design and intelligent engineering technologies such as computational technologies, sensing technologies and video detection encompass both theory and application perspectives. Being multidisciplinary in nature, intelligence engineering promotes cooperation, exchange and discussion between organizations and researchers from diverse fields. This book presents the proceedings of DSIE 2022, the International Symposium on Design Studies and Intelligence Engineering held in Hangzhou, China on 29-30 October 2022. This annual conference proves a platform for professionals and researchers from industry and academia to exchange and discuss recent advances in the field of design studies and intelligence engineering, inviting renowned experts from around the world to speak on their specialist topics and allowing for in depth discussion with presenters. The 189 submissions received were each carefully reviewed by 3 or 4 referees and the 62 papers accepted for presentation and publication were selected based on their scores. Sub-and Supra-Second Timing: Brain, Learning and Development Lihan Chen, Yan Bao, Marc Wittmann, 2016-08-15. Time perception in the range of milliseconds to a few seconds is essential for many important sensory and perceptual tasks including speech perception, motion perception, motor coordination and cross modal interaction. For the brain to be in synchrony with the environment, the physical differences in the speeds of light and sound as well as stimuli from other modalities such as odors must be processed and coordinated. P. Bao et al 2015. Time is a subjective feeling that is modulated by emotional states which trigger temporal distortions: temporal dilation vs contraction. Wittmann et al 2014. Hence give rise to subjective time that may be different to event time as initially registered in the brain. Recent research suggests that time perception in a multisensory world is subject to prior task experience and shaped by statistical learning processes. Humans are active learners. That is the engagement of the own body in a timing task within a perceptual action.

loop will make a noticeable difference in timing performance as compared to when humans only passively perceive the same perceptual scenario Bao et al 2015 Chen Vroomen 2013 This Research Topic of Sub and Supra Second Timing Brain Learning and Development has integrated sixteen submissions of novel research on sub and supra timing We have categorized the papers in this topic into the following four themes from which we can deduce trends of research about multisensory timing in the sub and supra second range Sensory timing interaction and reliability Adaptive representation of time learning and temporal prediction Sensorimotor synchronization embodiment and coordination Perspective of psychological moment and temporal organization Overall the collections in Sub and Supra Second Timing Brain Learning and Development show some recent trends and debates in multisensory timing research as well as provide a venue to inspire future work in multisensory timing
