

SCAIL-Combustion User Guide

SCAIL-Combustion is a simple screening tool for assessing impacts from pollutant sources on people and ecosystems. The SCAIL-Combustion user guide provides information on IPPC, critical loads and the model, as well as providing a walk-through of the system itself. You will be shown how to complete a query using the web form and how to interpret the results.

1 Introductions

1.1 Legislative Introduction

Emissions of NO_x and SO₂ from combustion sources and their subsequent deposition to sensitive ecosystems, impose an environmental burden both nationally and internationally. At a local scale the deposition of nitrogen and sulphur in the forms of nitrate (NO₃⁻) and sulphate (SO₄²⁻) can result in acidification of soils in sensitive ecosystems. The precursor gases, NO_x (= sum of NO and NO₂) and SO₂, are controlled under the UNECE and EC emissions abatement agreements of the Gothenburg Protocol by the National Emissions Ceiling Directive, the Directive on Integrated Pollution Prevention and Control (IPPC), the Pollution Prevention and Control (Scotland) Regulations 2000, the Pollution Prevention and Control Regulations (Northern Ireland) 2000 and the Environmental Permitting (England and Wales) Regulations 2007. Permits are required for combustion installations with a rated thermal input exceeding 20MW.
