Chapter 13 Section 3: Liquids

Name _____ Period _____ Date _____

1. Describe the type of state according to the kinetic molecular theory.

Answer: In the liquid state, particles have enough energy to move past one another, but not enough to escape completely from the liquid.

2. List the properties of liquids.

Answer: High density, definite mass, indefinite shape, definite volume, surface tension, evaporation, viscosity, formation of meniscus in narrow containers.

3. How does the kinetic molecular theory explain the following properties of liquids?

- a. Relatively high density

Answer: The particles are close together - they are only not in fixed positions as their molecules are.

- b. Ability to diffuse

Answer: Particles in a liquid are free to move about in random ways (in all directions).

- c. Ability to evaporate

Answer: In a liquid, all molecules have a range of speeds. Some will not have the energy to escape, but some will have enough energy to escape.

- d. Change in evaporation and condensation

Answer: Evaporation is the process in which a liquid will change to a gas. Condensation is the other particles around the liquid and they will change to a liquid.

Savage, 2013-11-11 Study of the phenomena of bacterial adhesion to surfaces has accelerated considerably over the past 10 to 15 years During this period microbiologists have become increasingly aware that attachment to a substratum influences considerably the activities and structures of microbial cells Moreover in many cases attached communities of cells have important effects on their substratum and the surrounding environment Such phenomena are now known to be important in plant and animal hosts water and soil ecosystems and man made structures and industrial processes Much work on microbial adhesion in the early 1970s was descriptive Those studies were important for detecting and describing the phenomena of bacterial adhesion to substrata in various environments the findings have been presented in numerous recently published excellent books and reviews In some studies attempts were made to elucidate some fundamental principles controlling adhesion processes in different environments containing a variety of microorganisms Common threads have been observed occasionally in different studies

Taken as a whole however the information has revealed that many disparate factors are involved in adhesion processes
