Heavy-ion Collisions Gonzalo Madurga, Manuel Lozano, 1982 **Habitus and Drug Using Environments** Stephen Parkin, 2016-04-22 Informed by the thought of Pierre Bourdieu and framed by the philosophy of harm reduction Habitus and Drug Using Environments provides a sociological analysis of public environments affected by injecting drug use Drawing on ethnographic research across several locations this book offers a qualitative and phenomenological account of the social organisation of public settings used for the preparation and administration of illicit drugs informed by interviews with both injecting drug users and those whose employment is directly affected by public injecting drug use With attention to current policy related questions concerning the lived experience of place upon the health of injecting drug users how wider social structures contribute to participation in public injecting and the manner in which participation in public injecting amplifies drug related harm Habitus and Drug Using Environments sheds light on the ways in which health and place interact to

produce and reproduce already established hazards associated with injecting drug use As such it will be of interest to sociologists geographers criminologists and policy makers working in fields such as drug use risk behaviours and their relation to place and health studies

Thompson,Dale E. Chimenti,1988-05 It has been shown both experimentally 2 and theoretically 2 3 that surface skimming SH waves propagating along symmetry axes of the texture have velocities that differ in proportion to the magnitude of any stress that lies along one of the symmetry axes Specifically the stress is directly proportional to the relative velocity difference through the equation $V_{ik} = \frac{V_{ki}}{1 + \frac{c_r}{2G}} V_{ik}$ where c_r is the stress in the direction i G is the shear modulus and V_{ik} is the elocity of an SH wave propagating in the i direction and polarized in the k direction This rather simple relationship is particularly useful because the constant of proportionality involves only the well known shear modulus and the velocity term can be measured directly by observing the transit time shift when a transmitter receiver pair of SH wave transducers are rotated through 90 degrees on the surface of the part Experimentally Equation I was tested on the web of railroad rails which had been loaded by a 200 000 pound mechanical testing machine I The method of exciting and detecting the necessary surface skimming SH waves used electromagnetic acoustic transducers EMATs that operated through a magnetostrictive mechanism at high magnetic fields 4 Wave velocities parallel and perpendicular to the axis of the rail on the web differed by the amount predicted by Equation I to an absolute accuracy of 30 percent in the worst case
