Successful Architecture Implementation Roland Woldt, 2025-03-24 Nobody wakes up one morning in their early years and says I want to become an enterprise architect But there is a need for this skill set in organizations The better ones you know the ones who seemingly can change on the fly have implemented a practice either focusing on the whole enterprise or on process management or IT architecture in a lower maturity state But what are some reasons for the sad state of affairs when it comes to architecture Organizations have outdated or no documentation Nobody understands what was implemented in the necessary detail The impact of proposed or actual changes downstream is not clear and doing the analysis is a painful exercise so often it will be replaced with a wild guess You will be able to collaborate with all affected parties There might be a tension between business and IT as the two largest players here that can be resolved by creating a shared view of the changes Upstream planning How does my change fit into the bigger picture or our project landscape is also a wild guess and the pet project of a stakeholder gets priority The potential improvements of your suggestions are not seen or cannot be quantified Creating a business case becomes a nightmare of wild guesses Regulators might require the establishment of the capability and you have to stand it up if you like it or not But you don't know how to do this If you go down the route of implementing an architecture program and capability you can reap multiple benefits Some of them are Enable planning and bigger picture when it comes to structures architectures and projects Establish common language and approach in your organization The structured discipline will help to find operational and compliance improvement potentials You can literally see what is going on in your organization and only what you can see can be improved What is this book about The main promise of the book is that you will be able to implement a BPM EA program in your organization and cover all aspects that are needed to be successful and bring the people with you on this exciting journey It covers all aspects from strategy through governance design and tool selection configuration to import and creation of content in an easy to follow approach In addition to this it also shows how a real world application of this approach could look like Who is this book for This book is for the brave people who understand that organizations are complex systems and that changes in one place will have an impact on many people ask anyone who has ever implemented an ERP system Typically every stone will be overturned in a transformation program It is for those people who realized that they have to implement an architecture capability in

their organizations They have to be able to describe analyze plan support the implementation of changes and measure their impact to be able to manage the enterprise in a responsible and sustainable way It is also for the people who have tried that before and failed Maybe because they only focused on the implementation of a tool the make it and they come approach or they forgot that people typically do not want to change It is also for the curious people who are not 100% convinced that this architecture thing is not too big of a bite for your organization They would like to learn what it takes before they make the decision if they are ready for it But wait this is not all This book also comes with a code for the accompanying website which includes additional tools all graphics as a downloadable PDF a worksheet that will help you to select your architecture tool and a tracker in Notion when it comes to importing your existing content into your tool
