

# Origin of the Earth

The Earth probably formed from material in the solar nebula—the cloud of gas and dust that led to the formation of the Sun. This material gradually grew into a larger and larger body that became a red-hot ball of rock and metal. Later the rocky crust formed, its surface cooling enough to allow the continents to appear. Even later the oceans arrived, as well as the tiny organisms that released oxygen into the atmosphere. Although much of this gas was initially consumed in chemical reactions, over time, it allowed the development of multicellular organisms and an explosion of life that took place at the start of the Paleozoic Era, 542 million years ago.

## Continental Drift

Over time the continents, which are part of tectonic plates that drift across the Earth's surface at the rate of a fingernail's growth, 3/16 of an inch per year, have shifted. Africa, Australia, and Antarctica were part of the supercontinent Gondwana. When tectonic plates are pushed together, they can push together and submerge one under the other. When the plates separate, a rift forms. The rift eventually fills with water through the ocean as the water level that remains above the rift becomes lower than the water level in the surrounding oceans. When plates slide past one another, a transform fault can form. When plates collide, a mountain range can form. The collision of plates can also push the continents past one another, changing the face of the world.

**1 THE HADEAN EON AND THE FORMATION OF THE EARTH'S CRUST**  
The Hadean Eon is the earliest eon in Earth's history. It lasted from 4.565 billion years ago to 4.0 billion years ago. The Earth's crust formed during this time.

**2 THE ARCHEAN EON AND THE FORMATION OF THE FIRST SUPERCONTINENT**  
The Archean Eon is the second eon in Earth's history. It lasted from 4.0 billion years ago to 2.5 billion years ago. The first supercontinent, Rodinia, formed during this time.

**3 THE PROTEROZOIC EON AND THE FORMATION OF THE FIRST SUPERCONTINENT**  
The Proterozoic Eon is the third eon in Earth's history. It lasted from 2.5 billion years ago to 541 million years ago. The first supercontinent, Rodinia, formed during this time.

## Origin of the Earth

The Earth was formed 4.54 billion years ago from a cloud of dust and gas. In the beginning, it was a molten, glowing sphere. As it cooled, the outer layer solidified, and the atmosphere began to form. The first life appeared 3.8 billion years ago.

**4 THE FORMATION OF THE FIRST SUPERCONTINENT**  
The first supercontinent, Rodinia, formed 750 million years ago. It was a supercontinent that contained all of the world's landmasses.

## Chronology

Chronology is the study of time in the Earth's past. It includes the study of the Earth's history and the study of the Earth's future. Chronology is the study of the Earth's past and the study of the Earth's future.

Through the study of fossils, evidence of ancient life is found. The fossils provide information about the life that lived in the past. The study of fossils is called paleontology.

## Tectonic Plates

The surface of the Earth is composed of tectonic plates. These are rigid upper plates, some of which are composed of both crust and upper mantle. The plates' boundaries are marked by major features, such as mountain ranges and deep-sea trenches.
