When multiple forces act on an object, they can combine to cause an object to move in a different direction or at a different speed. When the forces on an object are balanced, the object will not change its motion. When the forces on an object are unbalanced, the object will change its motion. The direction and speed of the object's motion will change depending on the forces that act on it. For example, if a person pushes a shopping cart to the right, the cart will move to the right. If a person pushes the cart to the left, the cart will move to the left. If a person pushes the cart down, the cart will move down. If a person pushes the cart up, the cart will move up.
