When multiple forces act on an object, they combine to produce a net force, which determines whether the object speeds up, slows down, or changes direction. Understanding how forces act together is essential to explaining various phenomena, from a ball being kicked to a rocket launching into space.</p> <p>Newton's second law of motion states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force increases, the acceleration increases proportionally, but if the mass also increases, the acceleration will decrease.</p> <p>Forces also interact to determine the stability of an object. Pushing a cart with a small weight makes it easy to tip over, while pushing a cart with a large weight makes it more stable. Understanding how forces act together is essential to designing structures, from bridges to buildings, and to understanding the motion of objects in space, from planets to rockets.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> <li>Which of the following is not a type of force?             <ol style="list-style-type: none"> <li>Gravitational force</li> <li>Electromagnetic force</li> <li>Frictional force</li> <li>Centrifugal force</li> </ol> </li> <li>Which of the following is not a type of force?             <ol style="list-style-type: none"> <li>Normal</li> <li>Push</li> <li>Gravity</li> <li>Electric</li> </ol> </li> <li>Which of the following is not a type of force?             <ol style="list-style-type: none"> <li>Force</li> <li>Push</li> <li>Gravity</li> <li>Electric</li> </ol> </li> <li>Which of the following is not a type of force?             <ol style="list-style-type: none"> <li>Force</li> <li>Push</li> <li>Gravity</li> <li>Electric</li> </ol> </li> </ol> <div style="text-align: right;">  </div>
