Embedded Software Development Ivan Cibrario Bertolotti, Tingting Hu, 2017-12-19

Embedded Software Development: The Open Source Approach delivers a practical introduction to embedded software development with a focus on open source components. This programmer-centric book is written in a way that enables even novice practitioners to grasp the development process as a whole. Incorporating real code fragments and explicit real-world open source operating system references in particular FreeRTOS throughout the text, it defines the role and purpose of embedded systems, describing their internal structure and interfacing with software development tools. It examines the inner workings of the GNU compiler collection GCC based software development system or in other words toolchain. Presents software execution models that can be adopted profitably to model and express concurrency. Addresses the basic nomenclature models and concepts related to task-based scheduling algorithms. Shows how an open source protocol stack can be integrated in an embedded system and interfaced with other software components. Analyzes the main components of the FreeRTOS Application Programming Interface (API) detailing the implementation of key operating system concepts. Discusses advanced topics such as formal verification, model checking, runtime checks, memory corruption, security, and dependability.

Embedded Software Development: The Open Source Approach capitalizes on the authors' extensive research on real-time operating systems and communications used in embedded applications, often carried out in strict cooperation with industry. Thus, the book serves as a springboard for further research.

Cryptographic Hardware and Embedded Systems - CHES 2009 Christophe Clavier, Kris Gaj, 2009-08-28

CHES 2009, the 11th workshop on Cryptographic Hardware and Embedded Systems, was held in Lausanne, Switzerland, September 6-9, 2009. The workshop was sponsored by the International Association for Cryptologic Research (IACR). The workshop attracted a record number of 148 submissions from 29 countries, of which the Program Committee selected 29 for publication in the workshop proceedings, resulting in an acceptance rate of 19.6%, the lowest in the history of CHES. The review process followed strict standards: each paper received at least four reviews, and some as many as eight reviews. Members of the Program Committee were restricted to co-authoring at most two submissions, and their papers were evaluated by an extended number of reviewers. The Program Committee included 53 members representing 20 countries and several continents. These members were carefully selected to represent academia, industry, and government, as well as to include

world class experts in various research fields of interest to CHES The Program Committee was supported by 148 external reviewers The total number of people contributing to the review process including Program Committee members external reviewers and Program Co chairs exceeded 200 The papers collected in this volume represent cutting edge worldwide research in the rapidly growing and evolving area of cryptographic engineering *Proceedings of the ASME Dynamic Systems and Control Division*, 2006
