Philosophy of Technology Pieter E. Vermaas, 2011 In A Philosophy of Technology From Technical Artefacts to Sociotechnical
Systems technology is analysed from a series of different perspectives The analysis starts by focussing on the most tangible
products of technology called technical artefacts and then builds step wise towards considering those artefacts within their
context of use and ultimately as embedded in encompassing sociotechnical systems that also include humans as operators
and social rules like legislation Philosophical characterisations are given of technical artefacts their context of use and of
sociotechnical systems Analyses are presented of how technical artefacts are designed in engineering and what types of
technological knowledge is involved in engineering And the issue is considered how engineers and others can or cannot
influence the development of technology These characterisations are complemented by ethical analyses of the moral status of
technical artefacts and the possibilities and impossibilities for engineers to influence this status when designing artefacts and
the sociotechnical systems in which artefacts are embedded The running example in the book is aviation where aeroplanes
are examples of technical artefacts and the world aviation system is an example of a sociotechnical system Issues related to
the design of quiet aeroplane engines and the causes of aviation accidents are analysed for illustrating the moral status of
designing and the role of engineers therein Table of Contents Technical Artefacts Technical Designing Ethics and Designing
