*Knowing New Biotechnologies* Matthias Wienroth, Eugénia Rodrigues, 2015-02-20 The areas of personal genomics and citizen science draw on and bring together different cultures of producing and managing knowledge and meaning They also cross local and global boundaries are subjects and objects of transformation and mobility of research practices evaluation and multi stakeholder groups Thirdly they draw on logics of convergence new links between and new kinds of stakeholders spaces knowledge practices challenges and opportunities This themed collection of essays from nationally and internationally leading scholars and commentators advances and widens current debates in Science and Technology Studies and in Science Policy concerning converging technologies by complementing the customary focus on technical aspirations for convergence with the analysis of the practices and logics of scientific social and cultural knowledge production that constitute contemporary technoscience In case studies from across the globe contributors discuss the ways in which science and social order are linked in areas such as direct to consumer genetic testing and do it yourself biotechnologies Organised into thematic sections *Knowing New Biotechnologies* explores ways of understanding the dynamics and logics of convergences in emergent biotechnologies governance and regulatory issues around technoscientific convergences democratic aspects of converging technologies lay involvement in scientific research and the co production of biotechnology and social and cultural knowledge [Personalized Immunotherapy: Advancing processes to extend patient collectives](#) Patrick Schmidt, Stefan B.

Eichmüller, Yun-Fan Sun, Jonathan Scolnick, 2024-02-16 Cancer Immunotherapy apart from checkpoint inhibitors is a highly personalized medicine that puts the patient's cells in the focus of drug manufacturing and promises outcomes that rarely have been seen in the history of cancer treatment CAR T cells can be mentioned here as the key example that has gained FDA and EMA approvals as the first living drugs for the treatment of leukemias and is now under clinical investigation for application in solid tumors as well Improvements in cellular engineering in combination with advanced sequencing methods have made it possible to discover tumor mutation specific T cell receptors that can be used to redirect effector cells toward the malignant cell pool with high specificity This approach opens the opportunity to drug driver mutations that are occurring in a group of patients as well as to design unique patient individual treatment regimens **Fertilization and Early**

**Embryogenesis: From Research to Clinical Practice** Martin Anger, Katerina Komrskova, Jason Knott, Ahmed Balboula, Paolo Rinaudo, 2025-01-23 Early embryo development in mammals begins with the recognition and fusion of gametes of both sexes followed by a series of mitotic cell divisions The gamete fusion results in the formation of totipotent cells which are capable of developing into three basic cell lineages in mammals These include the trophoblast surrounding the embryo and facilitating communication with the mother the epiblast which develops into the fetus and the primitive endoderm which forms the yolk sac Until implantation the embryos undergo remarkable changes including histone modifications chromatin remodeling epigenetic modifications of chromatin the onset of transcription from the embryonic

genome and the first differentiation to the formation of the trilaminar disc containing all primary cell lineages required for the formation of fetal tissues and organs Remarkably some of the most complex events of early development such as fertilization are achieved during complete transcriptional silencing Another unique feature is how fast the development proceeds In humans reaching the stage of early gastrulation takes approximately two weeks

*Protected Areas* Lucas N. Joppa, Jonathan E. M. Bailie, John G. Robinson, 2016-02-10 Protected areas spearhead our response to the rapidly accelerating biodiversity crisis However while the number of protected areas has been growing rapidly over the past 20 years the extent to which the world's protected areas are effectively conserving species ecosystems and ecosystem services is poorly understood Highlights new techniques for better management and monitoring of protected areas Sets guidelines for the decision making processes involved in setting up and maintaining protected areas Fully international in scope and covering all ecosystems and biomes

**The Environmental Policy Paradox** Zachary A. Smith, Peter Jacques, 2022-11-29 Now in its eighth edition *The Environmental Policy Paradox* continues the book's tradition of offering an accessible introduction to the social economic legal and political matters pertaining to environmental policy while also developing the student's own unique views The text explains why some environmental ideas shape policy while others do not and illustrates that even when the best short and long term solutions to environmental problems are identified the task of implementing these solutions is often left undone or is completed too late New to the eighth edition New topics including environmental social movements and the anti environmental countermovements environmental justice corporate influence in regulatory affairs Analyzes the growing policy divide between the two parties and the efforts of both Republicans and Democratic presidents to undo the policies of their predecessor Updated discussions of environmental justice issues Includes a range of visual aids in figures and tables to demonstrate trends in the topics covered A new co author Peter Jacques recognized for his teaching and scholarship in global environmental politics and sustainability A must buy for courses in Environmental Policy Environmental Studies and Public Policy and as a supplement for courses in American Government and Public Administration

Legal Protection for Computer-Implemented Inventions Sabine Kruspig, Claudia Schwarz, 2016-04-24 As a result of the incorporation of computer software into countless commercial and industrial products the patentability of software has become a vital issue in intellectual property law This indispensable book provides an overview on the current status of computer implemented inventions in patent law across Europe and major jurisdictions worldwide A hugely practical field research tool with guidance based on case law it examines the major hurdles in each particular country and describes the best practice to be adopted Clearly showing how enforceable software patent applications can be competitively drafted and how a patent portfolio for computer implemented inventions can be established in several countries without spending money unnecessarily on problematic examination proceedings this book covers such issues and topics as the following claim categories for patent applications sufficient level of abstraction breadth of the claimed invention fundamental terms of computing and

terminological traps probability for patents dependent on software application areas and patents in core areas of computing With separate chapters for the key countries Germany the United Kingdom France the United States China Korea Japan India and the European Patent Office the legal situation for computer implemented inventions in each country or region this book includes guidance on prosecution under national law analyses of relevant court decisions practice checklists and an outlook on future developments The authors describe claim formulation based on actual cases and on principles of computer science in order to show what might be or might not be patentable in each jurisdiction With this incomparable resource patent attorneys and patent professionals in companies will get a basis for making decisions about the most appropriate jurisdictions in which to file patent applications This book will also be of great value to computer professionals who are affected by the protection of software or who are actively involved in the protection of software by patent law
