The EMC® Virtual Matrix Architecture™ is a new way to build storage systems that transcends the physical constraints of all existing architectures by scaling system resources through common building blocks called EMC Symmetrix® VMAX™ engines.

A single VMAX engine provides the complete foundation for a high-availability Symmetrix VMAX system. Each VMAX engine contains two Symmetrix VMAX directors, a cross-director communication path linking the two directors, and redundant interfaces to the EMC Virtual Matrix™ interconnect. Each Symmetrix VMAX director consolidates front-end, global memory, and back-end functions, enabling direct memory access to data for optimized I/O operations.

EMC Symmetrix VMAX SE systems are available in one- to two-bay configurations for 303 terabytes of usable storage capacity in a single system. The Symmetrix VMAX SE system is a new entry point for high-end storage, providing a compact footprint optimized for mainframe and open systems data centers, preserving space, power, and cooling.
